

Nordic WAY 2

Evaluation approach

NordicWay 2 Evaluation results webinar
17 December 2020

Satu Innamaa, VTT

NordicWay 2

- C-ITS pilot project to enable vehicles, infrastructure and network operators to communicate safety hazards and other information on roads in the Nordic countries
- NordicWay 2 objectives:
 - Pilot deployment of interoperable Day-1 & Day-1.5 C-ITS services
 - Contribute to harmonization and interoperability of C-ITS in Europe through C-ROADS
 - Support infrastructure readiness for Connected and Automated Driving
 - Assess impacts of C-ITS services

- Coordinator
 - Per Einar Pedersli, Norwegian Public Roads Administration
- More info: www.nordicway.net

Piloted services

Day-1 services

- In-Vehicle Signage
 -  In-vehicle speed limit
- Hazardous location notifications
 -  Weather and road condition
 -  Slow or stationary vehicle
 -  Emergency vehicle approaching
 -  Traffic ahead warning
 -  Emergency brake light
 -  Cooperative collision warning
- Road works warning
 -  Road and lane closure
 -  Mobile roadworks
- Signalised intersections
 -  Signal violation / intersection safety
 -  Time to green
 -  Green light optimal speed advisory (GLOSA)
 -  Traffic signal priority request
- Probe vehicle data
 -  Single vehicle data

Day-1.5 services

- Traffic management
 -  Traffic information & smart routing
 -  On-street parking information and management
 -  Information on alternative fuel vehicle fuelling & charging stations
- Connected and automated driving
 -  Data collection for mapping of infrastructure readiness
- Connected and cooperative navigation in and out of the city
 -  Dynamic access control of designated infrastructure
- Dynamically controlled zones
 -  Dynamic environmental zone

Interchange network

Norwegian Interchange

Finnish Interchange

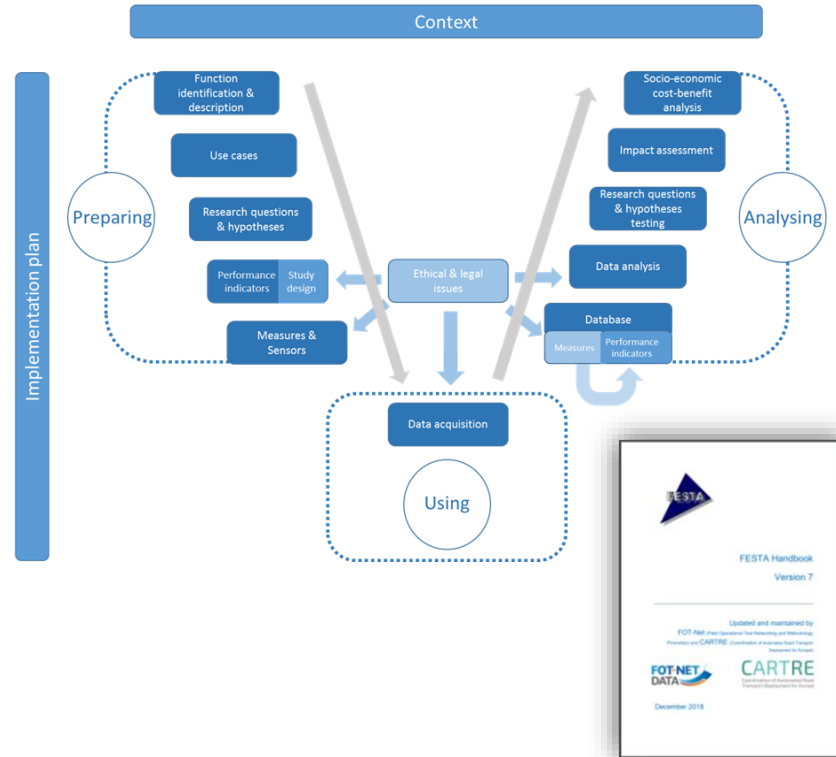

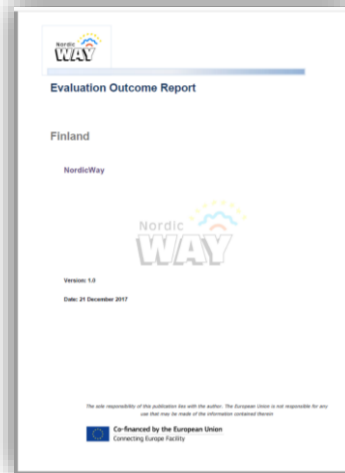

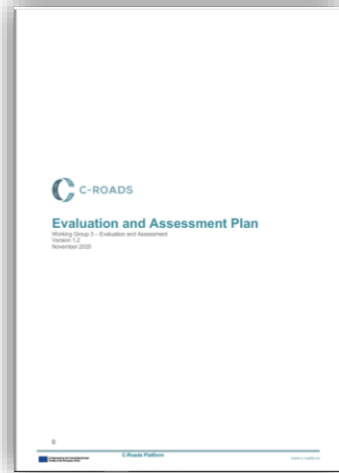

The system works almost everywhere, anytime and across borders

Co-financed by the European Union
Connecting Europe Facility

Methodological frameworks

- FESTA Handbook
- C-ROADS Evaluation and Assessment Plan
- NordicWay (1) methodology

Focus areas for the evaluation

- **Quality of service:**
Is the quality of C-ITS services sufficient?
- **User acceptance:**
Is general public interested in using these services and paying for them?
- **Ecosystems:**
What kind of ecosystems are fit for providing C-ITS services in the Nordic countries?
- **Socio-economic impact:**
Can we expect societal benefits from the C-ITS services?

Approaches for harmonisation of evaluations across NordicWay 2

Ecosystems

- Jointly made script for the workshops
- Local workshops
- Joint summary of results across all the countries

User acceptance

- Jointly made survey to study the user acceptance among general public
- Local translations, local data collection
- Joint summary of results across all the countries

Quality of services

- Common KPIs to be utilised at all sites
- Joint summary of results across all the countries

Socio-economic impacts

- Jointly made assessment of the socio-economic impacts for the whole region

Thank you!
