

NOTICE

FOR ALL PINE MOUNTAIN MEMBERS ON THE UPPER WATER SYSTEM

On May 10, 11 and possible part of May 12 we will be in the process of changing out the two transfer station pumps located at the entrance to the lower logging road. These two pumps supply water to the upper storage tank which supplies water to those members living on the following streets... (Upper system)

1. Blue Spruce starting with lot 788 and going to the top at lot 756
2. Uintah Drive starting with lot 779 and going to lot 774 Also lots 508, 507.and 780
3. Shingle Mill Drive starting at lot 739 and going to lot 755

With the limited amount of storage capacity in the upper tank, 45,000 gallons, we ask all members in this area to use water for necessary items only, Cooking, Flushing and drinking. . No outside watering of any kind should take place during time frame. **Please**. If we are going to have enough water for these two or three days we must ask for everyone to help conserve.

The Pine Mountain Board recommends that you have an emergency supply of water for this time. We will make every effort to make this change over in as short as time as possible to limit the effect on our members.

We appreciate your help and understanding during this change.

Please watch the Pine Mountain web site and FB for updates during this time period...

If you have any questions on this project, please contact a Board member.

Your Pine Mountain Board.
