

FAST ROPES

Fast Ropes are used by Special Forces and SWAT teams around the world. Manufactured from staple spun nylon 6 melt yarn in an 8-strand plaited construction the rope allows control through descent and therefore provides ease of slowing down and braking.

Our Fast Ropes have been designed to allow 3 personnel and personal equipment of 150kg each to safely descend

from the hovering aircraft. The suppleness of the ropes mean that it is not so hard on your hands compared to other ropes produced from other types of yarn. The nylon yarn of the Fast Ropes absorbs liquid and therefore you can keep control of the speed of descent.

We also have a weighted option that maintains rope stability in conditions of strong turbulence.

TERMINATIONS AVAILABLE:

SPLICED EYE

A large diameter connection for fast attachment offering good strength characteristics

ANODISED ALUMINIUM FITTING

A high strength heavy Duty universal fitting with a 45mm machined eye for quick attachment

12-STRAND DYNEEMA/HMPE TERMINATED EYE

Very high strength and low weight with low elongation properties. Safe when dropped as no hardware involved.

40MM SPECIFICATIONS

MATERIAL: Staple nylon 6 melt spun olive drab

CONSTRUCTION: 8-strand plaited

DIAMETER: Nominal 40mm

APPROX. MINIMUM BREAK LOAD: 10,560kgs

APPROX. WEIGHT PER METRE IN RELAXED STATE: 0.75kg/m

SHELF & SERVICE LIFE: 10 years
