Damage to ExoShield film can be caused by

Heavy scrubbing, dirty squeegees at gas stations, harsh solvents, (toluene, acetone etc.) corrosive chemicals, polishing cleaners.

For more details, contact Alchemy Support at 1-844-326-3838

Film Care

Preventative maintenance for users in environments such as construction sites, off roading conditions or during winter months is key to extending the life of your Exoshield.

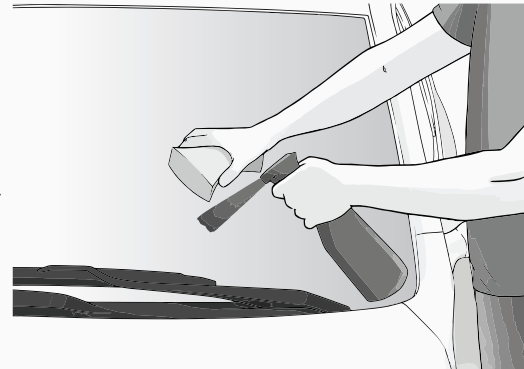

Salt spray, bird droppings and insects should be cleaned off immediately to ensure optimal Exoshield condition.

Cleaning your ExoShield

Simply cleaning ExoShield when performing regular car maintenance can help lengthen its life. When cleaning, be sure to avoid scrubbing the film with any abrasive materials to prevent scratching.

- Manual Washing
- Touchless car washing stations (without brushes)

Automatic/ Tunnel Car Wash Stations with Brushes

Always use clean sponges, paper towels or foam brushes to avoid scratching the film

Wiper Care

Check for wear, deformation, cracking of rubber, and residue under wipers every two weeks.

Any of the below may indicate the need for a new wiper

Streaking

Chattering

Smearing

Split rubber

Squeaking

Replace wipers every six months or at the first signs of wear

Cleaning your wipers

1. Dampen microfiber cloth or paper towel in washer fluid or ammonia free glass cleaner.
2. Wipe along the underside of the wiperblade until free from residue
3. Wipe any remaining residue off of windshield before putting wipers back in place.
