

How do you ensure readiness of your volunteer firefighters?

Prevent crewing deficiencies by providing 24/7 insight into on-duty crew, and giving firefighters the tools to manage their availability anywhere, anytime.

Ensuring a full crew complement of volunteer firefighters is becoming more challenging

Modern life has made balancing responsibilities of being a parent, employee and a firefighter more demanding. As a result, the availability of volunteer firefighters can vary strongly throughout the week. Pressure from home and work continue to make last minute changes to individual availability more frequent.

Still, at any moment of the day, a complete crew should be able to respond to an incident at a moment's notice.

With the individual availability changing so rapidly and frequently over time, how does your fire department make sure there are always enough volunteer firefighters available?

FireServiceRota specializes in advanced scheduling for volunteer firefighters. We offer intelligent web-based software designed to guarantee readiness, while maximizing firefighters' freedom to flexibly change their personal availability at any time, from any device.

FireServiceRota helps Fire Services to resolve crewing deficiencies well before they become critical.

FireServiceRota assures a full crew complement without the need of complex and rigid schedules. This way firefighters remain on duty when needed and free when possible.

The benefits of FireServiceRota in a nutshell

FireServiceRota guarantees the readiness of volunteer firefighters by providing:

✓ Support before the incident

- Manage the complexity of changes in the required crew complement and the schedules of the firefighters.
- Let firefighters manage their own schedules at any time, on any device.
- FireServiceRota has powerful and flexible support for even the most complex schedules: multi-weekly recurring duty schedules, last minute changes, (paid) standby duty and team schedules.
- Use geofencing to automatically detect changes in availability based on the firefighters' location.

✓ Support during the incident

- Integrate FireServiceRota with dispatch to intelligently alert the on duty crew.
- Request confirmation of attendance to all available personnel and shows their ETA in real time in a monitor at the station.
- Use navigation to show the most efficient route to the incident.
- Know in real-time who is attending which incident.

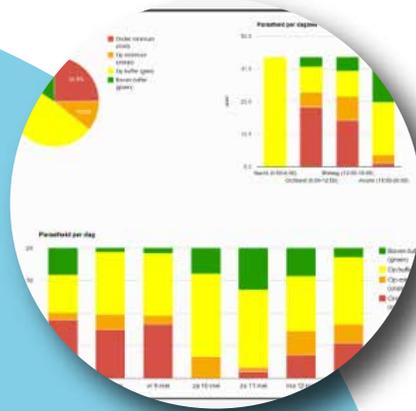

The benefits of FireServiceRota in a nutshell

✓ Support after the incident

- Generate automatic reports according to the needs and requirements of your fire station.
- Gather statistics on overall response times, as well as NFPA Emergency response time categories.
- Get insight at a glance into the historical availability of your crew. Powerful reporting tools help you identify recurring crewing deficiencies.

✓ Other features

- FireServiceRota is internet-based software. You don't need any servers or system administrators. You can access the system from any browser, smartphone app, smart pagers, and even SMS messages.
- Communicate with your crew through announcements, private messages and polls.
- Integrations with other systems, such as HR and CAD (computer aided dispatch) systems, to avoid manual input and prevent errors.
- Turn any screen into a display of the current status of the station, with real time information about staffing, announcements, incidents, and more.

FireServiceRota specializes in flexible scheduling software for volunteer firefighters. Founded in 2005, we assure the readiness of over 200 Emergency Services in The Netherlands, the United Kingdom, and the United States.
