

Got what it takes?

You might be the one we need!

The upcoming blockchain minor starts on the 2nd of September 2019 and will be taught on a brand new learning infrastructure called KOIOS. Originated and currently still situated in de Haagse Hogeschool (THUAS), KOIOS aims to combine the best properties of the physical as well as the digital learning environment. We hold **social learning & learning on the job** in **very high regards** and this is why we will use new digital technologies and new educational forms to connect the “quadruple helix”, enabling open collaboration between students, researchers, field experts and practitioners from the field.

Possible roles you can play?

1. Host guest lectures
2. Co-host events
3. Assignment provider
4. Internship provider
5. Professional work tool provider
6. Track owner
7. Consortium partner
8. Strategic partner
9. (Side) Job provider

“The blockchain Minor is the very first minor on KOIOS, but many more educational content and network connections will follow in rapid pace”

“Because we work with students, of which each of them has their own talents and commitment, we will work with a meet & greet / speed date concept to match you with the students. Because we work for free, we cannot guarantee a given outcome, but we have learned that “the more engaged you are, with students and the community alike, the more value you will be able to create”

What do we offer?

- Direct access to new talent
- Instant access to a national and international network that connects students, lecturers, researchers, entrepreneurs, government bodies, field specialists, other universities and most importantly: those with a passion for your cause.
- Engagement with a multi-disciplinary team of “minor” students, often in their senior part of their educational program, and with a decent understanding of the diverse array of blockchain fundamentals.
- Instant and open access to classes, as well as the educational content.
- Open access to network events & seminars
- Access to our relationship managers with vast networks, enabling you to connect with others based on your own activities and preferences. Will be based upon a personal meet & greet with a relationship manager.
- A spot on the KOIOS platform where you can introduce your problem in a 45 second pitch (our camera team will record you on our get together on August the 19th).
- All for free

1. Host guest lectures

Anyone can sign up to give a guest lecture. Our team discusses, in consultation with you, whether the content fits within the curricula and whether your story and activities add enough value for students. Guest lectures are like “mini-events”: open for public (unless preferred otherwise) and offered @ meetup.com and KOIOS communities.

2. Co-host events

By the end of the first blockchain minor (Feb 2020), we will host a big event (aim: 2000+ persons). We also host medium events of max. 500 persons and smaller events (100+) or less. We can also offer our main spaces, often freely if open for students, to host your own meet-ups.

3. Assignment provider

Here you provide a problem for four students to work on, for 10 or 20 weeks, 140 respectively 280 hours per student. To successfully complete your job as assignment giver: students must have access to employees and required material (intensity, of course, depending on the assignment type). You can arrange contact and locations with the students, we suggest to discuss this freely with students. Please take into account that if the complexity of the assignment increases, it is often desirable to increase the degree of supervision in order to ensure that the students do not "get bogged down". We will also monitor the execution of the assignment and, if possible, make adjustments in between. Experience has shown that the success of assignments increases as the involvement of management increases as well as the level of the assignment shows the right amount of complexity (to discuss together) .

4. Internship provider

This is the same as guiding regular interns, only now you will guide students that completed their blockchain minor and that you will probably get to know personally during the blockchain minor. The same framework applies as an assignment provider: just be available when the student really needs you.

5. Professional Work Tool provider

This used to be the old final thesis trajectory, but with minor adjustments that a student can now also graduate on professional work tools (“beroepsproducten”). This can still be a thesis, but also the more applied practical variants like building dashboards or applications etc. are allowed.

6. Track owner

A track owner is just like the assignment giver, only now the assignment covers multiple years as well as multiple disciplines. These tracks often tend to solve the bigger societal problems. If you become a track owner we will need to cover your story and convert in a story line that we can inspire students and other members of the KOIOS community alike.

7. Consortium Partner

Often combined with being a track owner is being a consortium partner. This means that we will join our strengths and will tackle your problem together with multiple partners from our joined networks. This often results in funded public-private partnerships that aim to tackle a societal problem.

8. Strategic Partner

If you or the entity you present aim to create a better world through education or connecting people, chances are that our goals are aligned. Based on each other's properties we often tend to look for synergy. Either officially announced with LOI's etc. or unofficially, the status depends on your preference.

9. (Side) Job provider

If you have found the talents you were looking for, don't hesitate and feel free to offer them a parttime job.

Although currently mostly empty, you can find a sneak preview and a bit more information on www.koios.online

Interested? Just let us know
