

Fund Update as at 30 September 2020

CC JCB Global Bond Fund - Unhedged Class (APIR: CHN1425AU)

Fund Benefits

Active Management

JCB is a specialist fixed income manager with significant global investment management experience and expertise.

Access

The Fund provides access to investment knowledge, markets, opportunities and risk management systems that individual investors may not be able to obtain on their own.

Diversification and Income

When bonds are held as part of a broader portfolio of different asset classes, diversification may assist in managing market volatility. Bond securities in general are considered a defensive asset class. The income generated by bond securities is consistent and regular (usually semi-annual).

Market Review & Outlook

Strong returns for fixed income in September

September delivered a wobble in risk markets combined with growing expectations of further RBA policy support delivering positive returns for fixed income investors. Risk market momentum turned negative for the first time since the violent sell off of in March, seeing key reversals in many market darlings of the last six months. The US technology sector lead equities lower, turning over the Australian dollar, which now looks to have a top in place as we head into the binary US election period come 3 November. Bond markets maintained solid negative correlations to equities, but the addition of further policy support from the RBA into Q4 further supported fixed income, whilst also being an additional drag on the AUD currency.

Will negative interest rates fix the economy?

The focus of the RBA seems to have shifted to additional support via small interest rate cuts, and possible additional bond buying in longer maturities to stimulate the economy still beset by ongoing Covid-19 lockdowns in Victoria. This also seems targeted at lowering the currency to foster growth once the lockdowns end and the disaster relief funding of generous job keeper programs starts to wind down, with the first of these moves occurring on 28 September. The RBA remains a highly reactive Central Bank, with a very poor record around recent communications of medium term monetary policy. Not long ago it was telling markets the neutral rate of interest was around 3.00% in the Australian economy – in a world of essentially zero interest rates, this looks like commentary from a parallel universe. The RBA kept rates at 1.50% for three years (mid-2016 to mid-2019) telling markets they didn't envisage going any lower, but alas here we are at a 0.25% cash rate which is likely headed lower still, come the November meeting. Covid-19 is clearly the reasoning for such moves, but JCB believes Covid-19 is just a rapid accelerator of prevailing slow burning secular themes.

The RBA further commented that it would study Quantitative Easing (QE) but assumed it would be unlikely to utilise such a program. Here we are in the throes of an active QE program that is also likely to further swell. Which brings us to negative interest rate policy. Again, we are being told this is unlikely and not preferred. JCB firmly believes that the RBA has had to reluctantly embark on these major policy changes in response to a global environment that continues to draw many economies into dangerously low growth outcomes, and whilst it remains reluctant on negative rates, recent history is a poor guide for taking the RBA at their word. Other Central Banks with similar mandates such as the Bank of England and Reserve Bank of New Zealand are now openly exploring negative interest rate policy, with most of these domestic bond markets now trading at negative yields.

Australian bonds continue to look cheap and steep in a global context. Given the global appeal of Australian fixed income, it remains little surprise to see further records for Australian Bond issuance. In September, the Australian office of Financial Management (AOFM) issued a new syndicated six year bond which received an initial \$86 billion of bids (this dropped to just over \$60 billion when pricing was revised tighter during the book building process). This issue printed with a size of \$25 billion only, again leaving material demand unsatisfied.

Fund Update as at 30 September 2020

CC JCB Global Bond Fund - Unhedged Class (APIR: CHN1425AU)

Outlook for markets in this election year

The outlook for markets remains clouded by significant binary events, namely the US election and the uptick in second wave Covid-19 cases coming into the Northern Hemisphere winter. The US election seems unlikely to be resolved around the November election day with a significant chance of a Supreme Court challenge should the Trump administration lose the election, as current polling would suggest. The appointment of a new Supreme Court justice in Amy Coney Barrett, which we expect before election day, will tip the court to a 6-3 conservative majority which will give Trump a springboard for legal escalations. We needn't look further than the recent first presidential debate to see the circus of US politics in action with Trump seemingly willing to do anything to maintain his grip on power.

European Covid-19 cases continue to spike into a second wave, with isolated restrictions and lockdowns now occurring. This places additional drag on economies which are only just semi-normalising after the knock-on effects from the March and April lockdowns. European Covid-19 cases lead the US case count by two to four weeks in the first wave, and a material second wave would also complicate the US election process. Trump's approval rating shows a high correlation to US case counts, should this relationship hold into November with escalating US cases at that time, it would likely be viewed as negative for Trump and the outlook for the US dollar, which has closely followed Trump's popularity.

Fund Review

For the quarter ending September, the CC JCB Global Bond Fund – Unhedged Class returned -3.55% (after fees), underperforming the Barclays Global G7 Total Return Index Value Hedged USD (converted to AUD).

September is traditionally the return from summer holiday, thus, the resumption of bond issuance. This year may have been different as summer holiday blended into working from home life and a lack of traveling. The Underlying Fund started the month with a very sizable short duration position in US Treasury which turned into a modest long duration position when the fiscal deal showed signs of failing pre-election and equity markets rolled over. In Europe, the Underlying Fund went from long Italian debt to be neutral as the Italian 30-year bond yield plummeted to all time low. The Underlying Fund also switched from holding the green bond in Ireland to participate in the first ever German green bond. In cross market, the Underlying Fund implemented some relative value box trades across Japan, Germany, UK and Australia. The AUD/USD also weakened around 3% in September. The Fund made absolute returns of almost 4% from both bond and currency movements.

Definition of Terms:

Modified Duration - is a systematic risk or volatility measure for bonds. It measures the bond portfolio's sensitivity to changes in interest rates.

Yield to Maturity + Hedging Effect - is the total return anticipated on the portfolio if the bond holdings were held until their maturity, including the cost or benefit associated with the currency hedge.

Weighted Average Credit Rating - is a measure of credit risk. It refers to the weighted average of all the bond credit ratings in a bond portfolio.

Duration Contribution - refers to the portion of the overall duration attributable to the segment (i.e. credit rating or sector) in years. Contribution to duration is calculated by multiplying an instrument's duration by the percentage weight of the instrument in the portfolio. This calculation includes the contribution to duration by holding futures contracts.
