02 // relevant experience

UX & UI Designer // National Institutes of Health // July 2019 - Present

I created a distinct visual identity for OHSRP using the U.S. Web Design System, and designed a new, approachable site to serve their diverse user base (including the NIH research community, participants in clinical trials, and IRB members). I worked closely with a developer to implement the site within Confluence.

I lead the routine update cycle, which includes identifying challenges, facilitating user testing, presenting findings to executive level leadership, and designing and implementing solutions. I act as webmaster, maintaining the content of the site.

Program Specialist & Staff Assistant // National Institutes of Health // March 2017 - July 2019

I designed a Sharepoint communications hub for a branch of the National Heart Lung and Blood Institute to ensure I could seamlessly manage the day-to-day operations of the branch. Facilitating daily operations included planning travel for government employees, compiling personnel packages for HR, and maintaining an open line of communication with immigration services on behalf of foreign nationals employed by the branch.

02 // skills

interface design, interaction design, user research, user testing, copywriting, HTML & CSS, prototyping, wireframing, personas, task flows, storyboarding, video editing, graphic design
