

Information: Flexibilization of production

Dear customers,

we hope that you have come through the corona crisis reasonably well in the past few months.

As the world's leading provider of Post-Press machines and systems, we were also affected by the corona crisis, such as extensive travel and accommodation restrictions. Fortunately, we were able to quickly adapt to the new situation and maintain the service, as well as to commission the existing projects and put them into operation on schedule. Thanks to the commitment of our employees, the help of our suppliers and the use of remote maintenance and phone support, we were able to ensure continuous service and spare parts supply and minimize the effects of the corona crisis on our customers.

Currently, many restrictions in Europe have been relaxed to an extent that we can resume our usual operations in sales and project execution as well as service and spare parts supply in most European countries. This also applies to North America and Asia through our subsidiaries RIMA-SYSTEM ATLANTA and RIMA-SYSTEM FAR EAST.

Since we believe that the limitations of global supply chains will continue for some time to come and the Graphic Industry market will continue to consolidate, we have decided to make our production more flexible and consolidate production capacity. We are ensuring for the future, that our production site in Germany will also be able to manufacture products that were previously manufactured in the USA only, especially the proven RS-36 S high-speed lift stacker. Therefore, you will continue to be supplied with all proven RIMA-SYSTEM machines and systems without restrictions.

Sincerely yours,

Dr. Axel B. Tübke
Managing Director
