01 Business Summary

Centrum Circle is a Tokenized Fund based on smart contracts, focusing on disruptive and profitable Crypto, Blockchain and Tokenizable projects. We provide companies with a globally compliant Security Token Offering (STO) and Initial Coin Offering (ICO), a suite of token-issuing services, and we cover all costs of these. At the same time, we provide investors with the opportunity to invest in prescreened blockchain projects with market-leading potential during the private-sale phase, before the tokens become publicly available. We are positioned to become the first globally compliant security-token-focused fund with the highest level of trust, security and transparency for token issuers & investors. We provide industry-specific blockchain solutions and services to ease access to the crypto world.

02 The Problem

The rise of ICOs has created a new way to raise capital for thousands of companies, but the industry is flooded with fraudulent or unprofessional teams' projects. The lack of regulation and a high degree of anonymity makes it incredibly easy for perpetrators to scam investors simply with the allure of a white paper and grandiose promises of high capital gains. In all this chaos, many governments and regulators have implemented strict precautions against ICOs, leading to a highly unpredictable and uncertain global regulatory climate for ICO issuers & investors. As all countries have different opinions and interests regarding ICOs, even making regulations is contradictory sometimes. It is hard or even impossible to prevent or punish scams and other possible damage by legal sanctions for the time being, so investors can only be protected by the creation of a logical set of rules supported by technology which makes fraud less plausible.

03 Our Solution

We have created a community-led set of rules to prevent fraud while working closely with regulatory bodies across the globe as they build their frameworks. Centrum Circle addresses the shortcomings and challenges of the constantly evolving security-token ecosystem by creating a bridge between the two main parties: investors and projects wanting to raise money through a token offering. We cover the costs of the whole STO or ICO execution. In addition to marketing the public token offering, our investment advisory board thoroughly examines and underwrites each project from the economic point of view. We will only support STOs for profit-generating projects that have a sustainable business model, a proven team and high chance of success, to which we contribute with our blockchain experience and development capabilities.

Investors within the Centrum Circle ecosystem will benefit from

- Exceptional investment opportunities in lucrative and prescreened blockchain projects vetted by an independent investment advisory board and our technical management team
- Exclusive access to the private-sale phase of pre-screened projects before the public launch of their STO
- Transparency and full disclosure for their investments every step of the way
- Full knowledge and accountability for usage of all funds raised
- Continuous and recurring income from future earnings of our portfolio projects from dividends and bonus coins
- Diversified portfolio of coin investments

Projects looking to launch STOs will benefit from

- No upfront fees - costs of the complete STO will be covered, including: technology incubation, and globally compliant STO execution for all viable blockchain, cryptocurrency, and tokenizable projects
- Technological, legal, financial, regulatory, and marketing services to securely issue successful STOs to ensure that they raise the money required for successful project execution
- Our strategic partnership with Deloitte
- Post-STO or ICO support.

Why should I buy CentrumCoin?

- Receive bonus coins from all future portfolio projects continually, every month
- Get exclusive access to the private-sale phase of all our portfolio project STOs launched, reserved only for CentrumCoin holders. This ensures that you can invest before public sale at prices which were earlier offered to institutional investors
- Have a share in profit - Centrum Circle is actively working to make it possible to distribute the profit generated on the platform among all CentrumCoin holders

Competitive Advantage

- Speed of execution and go-to-market strategy
- Not just a venture fund, but an STO platform offering full transparency and accountability to investors
- We focus on tokenizable businesses with existing revenue streams
- In order to safeguard the interest of our investors, we track the usage of raised funds by our portfolio companies, so that they can access only a portion of the money based on achieving specific milestones
- We are the first company in the industry who offers an exceptional guarantee to crypto investors, which means that if a specific project happens to fail for some external reason (markets, politics etc.), the funds which were preserved for the upcoming milestones will be given back to the investors who invested in that particular project.

The Team

Centrum Circle team has a strong track record and extensive experience in venture capital, investment management, accelerator-program management, blockchain development, crowdfunding, digital marketing, international law, and have worked at companies like Ethereum Foundation, McKinsey &Company, Lehman Brothers, KPMG, Citi.
