

We are looking for high performing Roadworthiness and Certification Engineer to join our team. The person should have extensive experience in working with system requirements, type certification and different certification programs and processes.

The individual should share the passion to engineer the best electric motorcycle in the world. We are constantly looking to innovate and adopt new technologies, so you should be able to embrace constant learning.

Responsibilities:

- Support the development team in system requirement generation by bringing in verification and certification topics.
- Assist in the development of manufacturing, integration, and test processes and procedures.
- Prepare verification and certification plans in line with company and authority requirements.
- Create certification related documentation.
- Provide guidance in certification related matters.
- Check and approval of test plans.
- Develop, check and approve selected verification methods in line with best practices.
- Direct liaison with test, manufacturing and production engineers.
- Constantly learn new things – and share them with your team members.
- Work on any ad hoc related projects or tasks.

Requirements:

- Degree in Mechanical/Electrical/Vehicle Engineer or related field.
- Experience in developing and working with system requirements.
- Proven professional knowledge of type certification methods.
- Excellent understanding of certification specifications.

Considered as an advantage:

- Proven experience with defining test programs is beneficial.
- Experience with a complete certification program from concept development to type design approval is very beneficial.
