## Core Competencies

RGS Construction Inc. offers a full range of land excavating services. This includes mass earthwork, trenching, clearing and grubbing, grading, surface sealing, crack filling and chip sealing. The company maintains several fleets of late model, highly efficient, name-brand machines and equipment in mint condition. We employ a crew of five full-time, experienced union laborers and machine operators with expertise in reading blueprints. They are certified in a wide range of disciplines, including pavement preservation

## Mission

RGS Construction is dedicated to serving the building and road construction industries with quality work, produced with the utmost concern for efficiency and safety. To fulfill this commitment we perform each job with proficiency, accuracy, precaution and a promise to deliver enduring and aesthetically pleasing results.

## Past Performances

RGS Construction has served general construction contractors and customers in government, industrial, commercial and residential markets throughout Northern Illinois. Since its establishment in September 2009, the company has completed scads of projects that exemplify its scope of work and commitment to quality. Highlighted below are a few of them.

**A Privately Owned Camp Ground in Northern Illinois** – RGS Construction provided excavating work and grading with a tar and chip surface sealing on various grounds throughout this outdoor facility.

**A Hotel Parking Lot just north of the I-80 Expressway** – RGS Construction provided saw cutting for the asphalt pavement, excavating, grading, hot asphalt paving, seal coating, striping and the installation of concrete sidewalks surrounding the lot.

**Five Driveways in a Rural Subdivision** – Our work for this project included long-lane grading with tar and chip surface sealing.

**A Township Project in a Rural Subdivision** – RGS Construction completed tar and chip patchwork for cracking roads.
