

Are you currently prescribed Abilify or Aripiprazole?

Participate in a research Study!

Who can Participate?

Adults 18-65 who have a diagnosis of a psychotic or a mood disorder, such as bipolar, depression, or schizophrenia and are currently prescribed Abilify

What is involved?

Six study visits each one month apart, use of Abilify MyCite System for 3 months, and taking surveys using the Harvard/BIDMC Smartphone apps for 5 months

What will you Receive?

Subjects will be compensated \$50 for each study visit and \$25 at visits 2-6 for use of phone in month prior for a possible total of
\$425

What is Abilify MyCite?

Abilify MyCite is a Food and Drug Administration (FDA) approved digital medicine system.

The Digital Pill

An Abilify pill embedded with an ingestible sensor. Upon contact with the stomach after ingestion, the sensor sends a signal to the MyCite patch to indicate the medication has been ingested.

The Wearable Patch

A sensor worn over the left side of the rib cage designed to detect the ingestion of the Abilify MyCite tablet, record the ingestion, and transmit ingestion data to the smartphone app.

The MyCite App

A smartphone app that displays the Abilify pill ingestion data collected by the digital pill and patch.
