Design Interactive Offers AUGMENTOR 2.0

Web portal for transportation focused, augmented reality job aid and training solution allows suppliers to distribute current inspection and repair updates almost instantly across multiple fleet and dealer locations

Orlando, Florida – June 3, 2019 -- Design Interactive Inc, providers of augmented and virtual reality (AR/VR) training solutions for fleet maintenance personnel, vendors and OEMs, today announced that Version 2.0 of its AUGMENTOR transportation focused augmented reality solution now features a new web portal for creating, editing and distributing training modules.

"AUGMENTOR 2.0's web portal empowers suppliers to rapidly create content and connect them with fleets and dealers," said Matt Johnston, division head of commercial solutions for Design Interactive. "Vendors and OEMs can use the web portal to create procedures and publish to the cloud as quickly as it takes to write and send an email.   Fleets and dealers can download the content to mobile devices or the Microsoft HoloLens headsets. Version 2.0 of AUGMENTOR ties everything and everyone together so procedures and training materials are always current, and campaigns can be developed and distributed almost instantly across multiple fleet and dealer enterprises."

Augmented reality content, including procedures and training created by suppliers or OEMs in the AUGMENTOR web portal supplements the ability to create content on headsets right at a vehicle in the shop. This gives AUGMENTOR unparalleled flexibility and increases the efficiency of content creation and distribution.

Earlier this year, Design Interactive made its AUGMENTOR solution's training modules available on Android and iOS mobile devices. The mobile applications include an augmented reality mode that lets technicians visualize procedure steps where they are conducted. For example, if a vehicle requires an inspection of its brakes, the steps are placed near or on that component or system and users can see 3D virtual representations of parts for reference during inspection or repairs. The mobile app also includes videos, audio messages and text instruction.

AUGMENTOR helps lower training costs and ensures consistency, especially as new technologies increase the complexity of repairs and skills needed by technicians. With immediate access to updated content, the transportation-focused solution can now be deployed quickly and effectively across multiple maintenance locations.

About Design Interactive Inc
Design Interactive Inc (DII) develops and deploys augmented, virtual and mixed reality training and enterprise solutions for the transportation, medical, aerospace, manufacturing, and energy/oil/gas markets as well the military. Design Interactive's extensive research and development expertise in using augmented and virtual reality technologies delivers innovative solutions that keep people safe, improve efficiency, and achieve optimum performance. Founded in 1988 and based in Orlando, Florida, Design Interactive is a woman-owned business. Visit www.designinteractive.net
