

## **Velociti Reaches 500,000 Assets Monitored by VeloCare**

*Velociti's Proactive Technology Monitoring and Repair service is being used for a rapidly growing number of interconnected technologies in a range of industries*

**Riverside, MO. – October 2, 2019** -- Velociti Inc., a global provider of technology design, deployment and support services, today announced that the steady expansion of VeloCare (formerly VelociCare) is bringing the technology monitoring and repair service to a wide range of industries.

“Every business depends on technology and is driven by a host of interconnected technologies,” said Deryk Powell, president of Velociti. “VeloCare, our Proactive Technology Monitoring and Repair service, is always on standby to troubleshoot, repair and replace technology with minimal downtime. Reaching 500,000 assets in less than three years showcases just how vital technology monitoring and repair services has become.”

Across a range of industries, VeloCare now works with more than 25 different technology providers and its proactive monitoring has been used on 500,000 vehicle, equipment and facility systems in transportation, retail, distribution, manufacturing, healthcare, government, education, and food service businesses. Currently, the service is rapidly expanding into more industries as the need to support the connected supply chain and the massive number of technologies surrounding it is recognized by suppliers and users alike.

“Our customers have adopted VeloCare because its proactive approach allows for technology problems to be addressed quickly and cost effectively,” Powell added. “A reactive approach to technology maintenance and support leads to increased stalls across supply chains, especially when technology solutions are connected and their failure has impacts across businesses, markets and entire industries.”

VeloCare is offered as a turnkey, flat monthly-based subscription for fleet and facility technologies that includes:

- Program and Project Management
- Proactive System Health Monitoring
- System Troubleshooting via a Tech Support Call Center
- On-Site Hardware Repair/Replacement
- Inventory Management, RMA Processing, Shipping, Staging

VeloCare programs are customized based on service categories, term, fleet and facility size, response times, and geography and other parameters. Visibility into all VeloCare activity is available 24/7 in Velociti's customer portal, Velogic, powered by salesforce.com.
