EXPERIENCE

UX Designer at Extron

Sep 2018 – Present

I designed across multi-functional teams to strategize and ship mobile, web, and desktop experiences for Device Management Services, Meeting Room Experiences, and internal Product Lifecycle Management enterprise software. In addition I created low to high-fidelity interactions, animations, interface guidelines, and prototypes for mobile and desktop web interfaces.

I also led the creation of Extron's first design system pattern library to unite the feel of web, desktop, and touch experiences.

Along with my design responsibilities, I evangelized Extron's design system by organizing collabs, working sessions, and alignment presentations to product managers, developers, sales, and marketing teams.

UX Designer at Thermo Fisher Scientific

Jan 2018 – Aug 2018

I coordinated with the product manager and a handful of business stakeholders to create the biotech industry's first loyalty rewards program for desktop and mobile web. My responsibilities included designing the end-to-end experience for the landing page, member dashboard, claiming system, rewards store, and checkout. I used data analytics to increase landing page conversions by ~75%.

In addition, I collaborated with the Design Director to redesign and ship responsive web headers for improved navigation and search. I also contributed components and usage guidelines to the ThermoFisher.com style guide.

UX Designer at Access California Services

Dec 2013 – Dec 2017

At AccessCal, I designed, coded, and templated rebranded web and mobile experiences. I conducted user research, testing, measured conversions, and utilized data analytics to enable users to quickly locate services.

CONSULTING

Product Design Consultant at Isadora Digital Agency

Sep 2018 - Jun 2019

My responsibilities included creating pitch decks enlightening clients on modern design standards, the ROI of UX, delivering wireframes and prototypes, and working with cross-functional stakeholders such as upli (iOS fintech app), Kelley Blue Book (design systems redesign), and SADA Systems.

Volunteer at CoVital

Jan 2020 – Mar 2020

Designed an open source oxygen sensing app using a smartphone camera.
