Are you sick with COVID-19 symptoms?
Fever, cough, and/or shortness of breath?

- Yes, I am sick
  *Isolate

You can stop home isolation when...

- You DID NOT have a test taken
- You DID have a test taken (*testing will be on a case by case basis)

You can leave home after these three things have happened:
1. You have had no fever for at least 72 hours (that is three full days of no fever without the use medicine that reduces fevers)  
   AND
2. other symptoms have improved (for example, when your cough or shortness of breath have improved)  
   AND
3. at least 7 days have passed since your symptoms first appeared

No, but someone else in my household is sick
*Quarantine yourself immediately, at home and self-monitor (take your temperature 2x/day, assess for above signs and symptoms for 14 days

If your family member is out of isolation before the 14-day quarantine is over, you may leave your home**, continue social distancing, and monitor for signs and symptoms until your 14 days have passed  
** unless instructed otherwise by the Health Department

No, I am not sick, nor is anyone in my family
Continue social distancing practices

Isolation is used to separate ill persons who have a communicable disease from those who are healthy. Isolation restricts the movement of ill persons to help stop the spread of certain diseases.

Quarantine is used to separate and restrict the movement of well persons who may have been exposed to a communicable disease to see if they become ill. These people may have been exposed to a disease and do not know it, or they may have the disease but do not show symptoms. Quarantine can also help limit the spread of communicable disease.
