

Revenue Rebook

Maximize revenue, even after customers book

Problem

Revenue managers can no longer rely on historical demand to make optimal pricing and availability decisions before customers book

Solution

Continuously re-optimize capacity and yield even after customers book

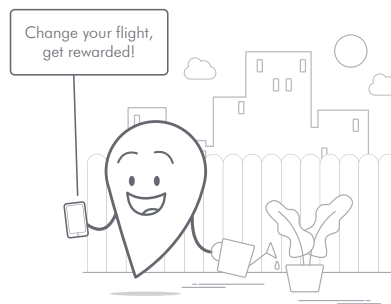

How it works

1

Detect opportunity

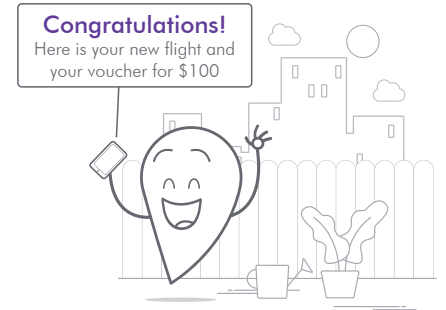

Volantio's platform, Yana, automatically matches higher performing flights with attractive alternatives

2

Send offers

Yana sends booked passengers an offer to switch their flight in exchange for a benefit. Volantio's proprietary machine learning system, GreenLeaf, chooses the profit optimal compensation and specific flight alternatives

3

Process results

Yana automatically rebooks passengers and issues their compensation. Performance data is fed back to GreenLeaf enabling continuous optimization

Why it's valuable?

Profit Optimal

Revenue Rebook lets airlines react to uncertain demand by continuously re-optimizing capacity and yield even after customers book

Fully Automated

Yana is fully automated and self-optimizing, powered by our GreenLeaf intelligence system, eliminating manual workflows for airline teams

Customer Centric

GreenLeaf ensures that each customer receives the optimal compensation offer and flight alternatives, improving engagement and success
