

# Plastic Effluent Tank

**If you require a holding tank for connection to a toilet block or shower block then the plastic Tuff Tank from D-tox Group is a much better alternative to the steel tanks available from other suppliers.**

The plastic tank will not rust or corrode like steel tanks will and the access ports are fully sealable to prevent spillages and odour. Plastic tanks are also a more hygienic product than steel tanks.

Because our tanks are plastic they are a more environmentally friendly product. They have a lower carbon footprint from production and because they are lighter than steel, use less fuel delivering them to site.

These tanks can easily be connected which means their normal 500 Gallon capacity can be doubled, or tripled or increased to whatever size is necessary.

- 500 Gallon / 2250 Litres capacity
- Linkable to allow creation of larger capacity tanks
- Any size tank available in multiples of 500 Gallons
- Telemetry - Wireless tank level monitoring available
- Less environmental impact than steel tanks

## Telemetry System now available

We can supply wireless tank level monitors to enable the site user to know when their tank is approaching full. A great way to ensure tanks never overflow and cause unsanitary spillages at site.

## Technical Data

### PLASTIC EFFLUENT TANK

HEIGHT:	510mm
LENGTH:	2800mm
WIDTH:	2000mm
DRY WEIGHT:	110kgs
VOLUME:	500 gallons / 2270 litres
