

Mains Connect Portable Toilet

If you have mains water and sewage on your site then a Portable Mains toilet may be the ideal solution.

These units can be easily sited and connected to a mains water supply and sewage outlet, allowing toilet facilities just like a normal flushing toilet.

All of our mains toilets feature a hot water hand wash system which will also require an electrical connection in order for it to function. Unlike normal portable toilets these mains units do not require a weekly service so once they are delivered we will not be required to visit your site again until collection.

Features

- Hot water unit with 3kW infrared water heater
- Motion sensor for 20 seconds of water flow
- 16Amp power socket fitted to cabin exterior
- Built-in light
- Hidden cistern with integrated soap tray
- ½" cold / fresh water connection
- 4" waste pipe connection
- Full plastic floor
- Simple maintenance and cleaning
- Porcelain WC bowl
