

Full Stack Developer BeNeLux

Who are we?

BISC Global is a young and fast growing company active in Bioinformatics and Statistics Consulting. In recent years, the major challenges in biotechnological research have shifted away from generating data and more towards data analysis. It is our goal to address these changing needs and build bridges between the worlds of biology and informatics, mathematics and engineering, young professionals and established experts.

As Full Stack Developer you will have the opportunity to work on an exciting internal project, as well as on interesting projects of BISC Global's customers in the pharmaceutical industry, biotech and academia. You will primarily focus on developing a data processing and analysis system based on existing Python tools. This tool will analyse and integrate complex biomedical data for end users who have little to no bioinformatics experience. Throughout this, you will be working with our senior experts in bioinformatics and statistics to provide you with optimal support during the development process of this tool. We will provide you with the optimal support in your professional and personal development.

Who are we looking for?

- You have at least a PhD or Master in Computer Science or similar degree, with a strong background in software development
- You have 3 to 5+ years' experience in software development
- You have a strong knowledge in Python.
- You also have knowledge in Java; C, C++, HTML are a plus.
- You have experience in co-developing web frontend e.g. Java react
- You have experience in designing user interactive software
- You have knowledge in Cloud computing experience (AWS preferred)
- You are eligible to work and live in Belgium
- If you also have experience in the biotech, life sciences or bioinformatics area, you are the white raven we are looking for!

What is expected of you?

- You have outstanding documentation and code management skills
- You have the ability to function independently in a non-software development environment
- You have rigorous project management and reporting skills
- You have good communication and interaction skills towards scientists with bioinformatic background
- You enjoy project-based working and have a strong analytical mindset
- You are eager to learn and have a healthy sense of responsibility
- You can work independently but are also a team player
- You enjoy working in a multidisciplinary environment with people of diverse professional background (IT, (molecular) biology, chemistry, statistics, etc.)
- You are communicative and customer focused
- You are fluent written and verbally in English

What do we offer?

- A challenging job environment with advancement opportunities
- A young and dynamic independent and international company with an open culture, easy communication and ambitious vision
- Project guidance and support from our academic experts
- A strong focus on your personal and professional development
- An attractive salary with additional fringe benefits (laptop, home-working, work-life balance, company car, group – and health insurance)
