

# Accelerating Equitable Decarbonization in the Northwest

*K & L Gates Environmental Law Practice Group*

► Eileen V. Quigley—June 15, 2022

# Agenda

- Clean Energy Transition Institute
- Decarbonization Pathways Studies
- Questions and Answers

# Clean Energy Transition Institute

3

- **What We Are:** Independent, nonpartisan Northwest research and analysis nonprofit organization
- **Our Vision:** Accelerate the transition to a clean energy economy in the Northwest
- **Our Role:**
  - Provide unbiased research and analytics
  - Offer an information clearinghouse for policymakers
  - Convene diverse stakeholders

# Northwest Deep Decarbonization Pathways Study—June 2019

# Why a Northwest Deep Decarbonization Study?

**Common set of assumptions** to inform decisions about how the clean energy transition could unfold over the coming decades

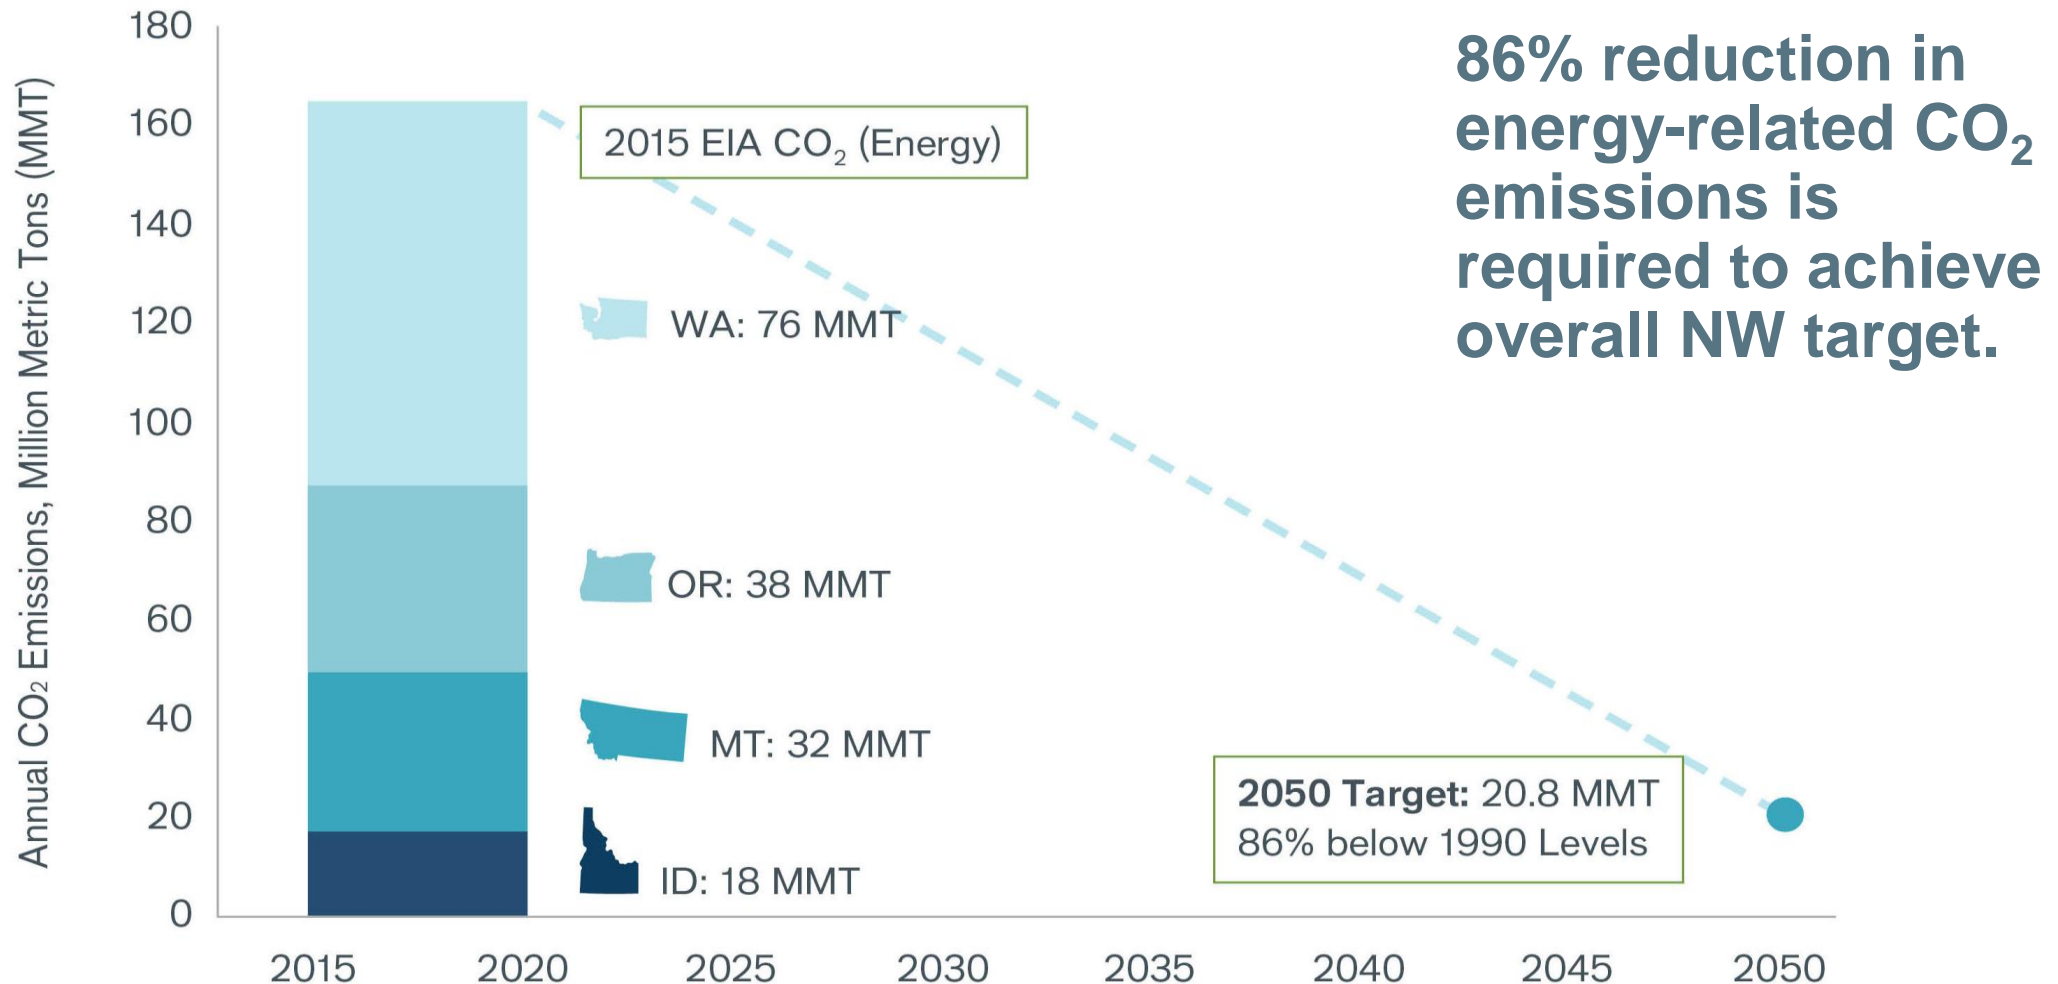

- Unbiased, analytical baseline for the region
- Variety of pathways to lower carbon emissions
- Surface trade-offs, challenges, and practical implications of achieving mid-century targets
- Broaden conversations about actions needed

# Comparison to Prior Decarbonization Studies

			 WA	 OR	 ID	 MT
2016	State of Washington Office of the Governor	All sectors				
2017	Public Generating Pool	Electricity sector only				
2018	Portland General Electric	All sectors				
	Climate Solutions	Electricity sector only				
	Northwest Natural Gas Company	All sectors; optimized decisions limited to electricity sector only				
2019	Public Generating Pool	Electricity sector only; reliability study				
	Clean Energy Transition Institute	All sectors; optimized decisions across entire energy supply side				

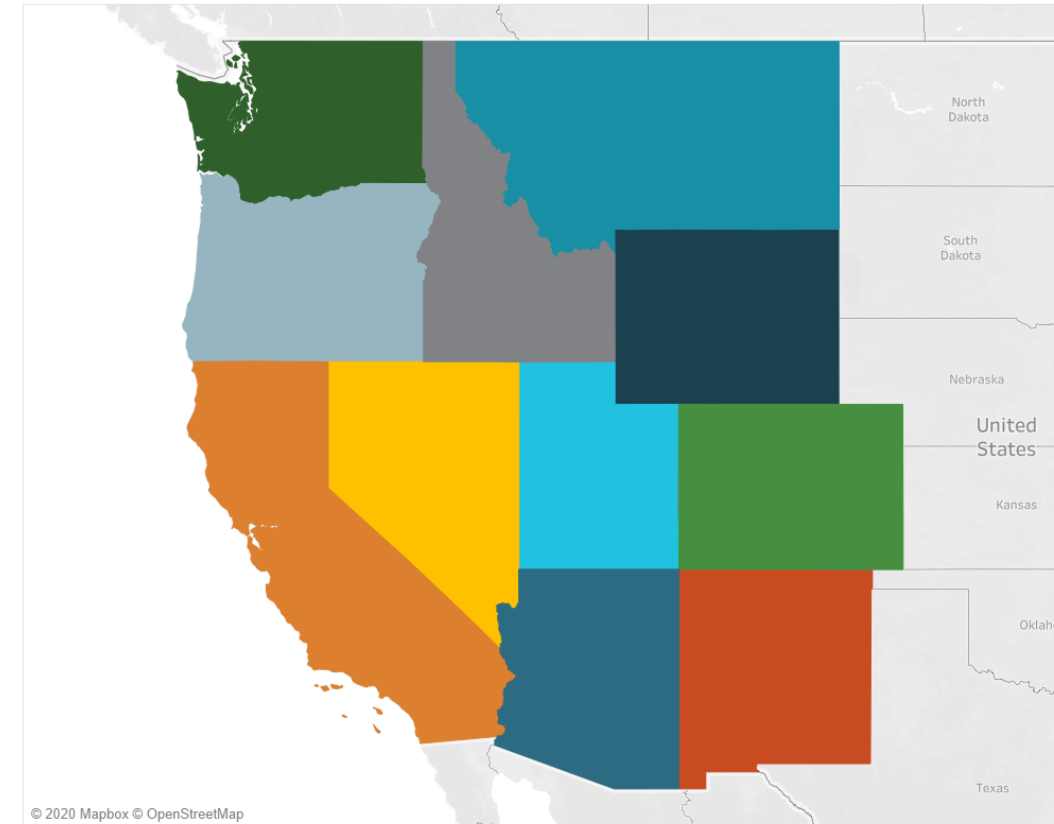

# Northwest Deep Decarbonization Target

# Northwest in the Context of a Western Grid

8

- Holistic Approach
  - Integrated across geographies and economic sectors
- Regional Representation
  - Other state's actions impact the availability and cost of solutions
  - 11 Western states
- Remainder of the U.S. also modeled

# What Did We Want to Know?

- How do we get to a 100% Clean Grid quickly?
- How do we avoid outages with intermittent supply and changing demand?
- How much and how fast can we electrify?
- How do we manage the cost impacts, overall and for different customers?
- What business and regulatory models and markets are needed?

# What Did We Learn?

- ~96% clean Electricity
- Clean electricity + highly efficient buildings
- Clean electric vehicles where possible
- Some, but not much, fossil fuel (natural gas) important for reliability and transition
- Improved regional transmission and integration
- Biomass should be used to replace jet & diesel fuel
- Fuels made from electricity will play important role

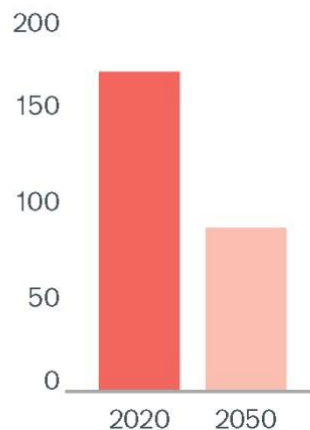

# Pillars of Deep Decarbonization

## 1 Energy Efficiency

Reducing energy consumed to provide energy services

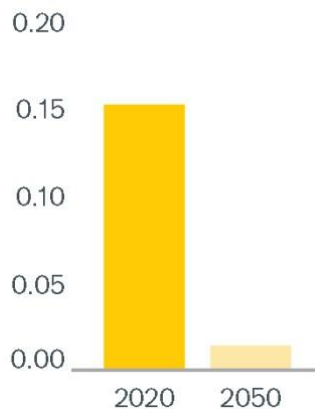

Energy Consumption Per Person (MMBtu)

## 2 Clean Electricity

Reducing the emissions intensity of electricity generation

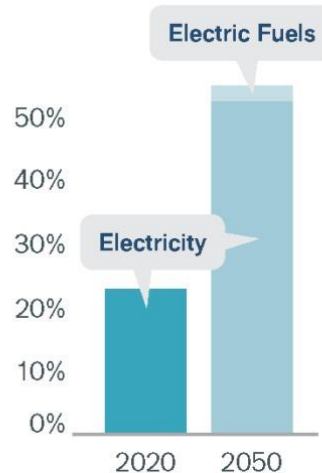

Electricity Carbon Intensity (tonnes CO<sub>2</sub> per MWh)

## 3 Electrification

Switching end uses from fuel to electricity

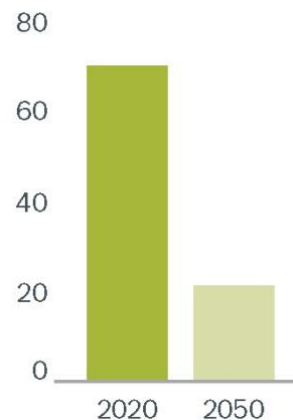

Electricity Share of Total Energy (percentage)

## 4 Low-Carbon Fuels

Reducing the emissions intensity of liquid and gaseous fuels

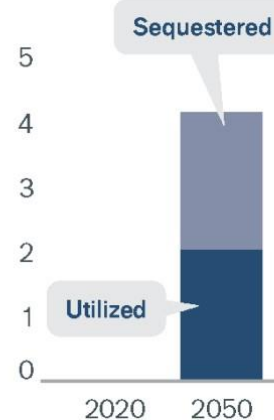

Fuels Carbon Intensity (kg CO<sub>2</sub> per MMBtu)

## 5 Carbon Capture

Capturing CO<sub>2</sub> from a facility or removing CO<sub>2</sub> from the atmosphere

Carbon Capture (Megatonnes CO<sub>2</sub>)

# Key Issues and Challenges the NWDDP Highlighted

- **100% Clean Grid:** How to deploy required renewables, transmission, storage, gas?
- **Reliability, Capacity & Resource Adequacy:** How to avoid outages with intermittent supply and variable demand?
- **Electrification:** How much, how fast? What happens to demand and how to manage it?
- **Affordability:** How to manage the cost impacts, overall and for different customer groups?
- **Business/Regulatory Models/Markets:** What is needed for the transition?

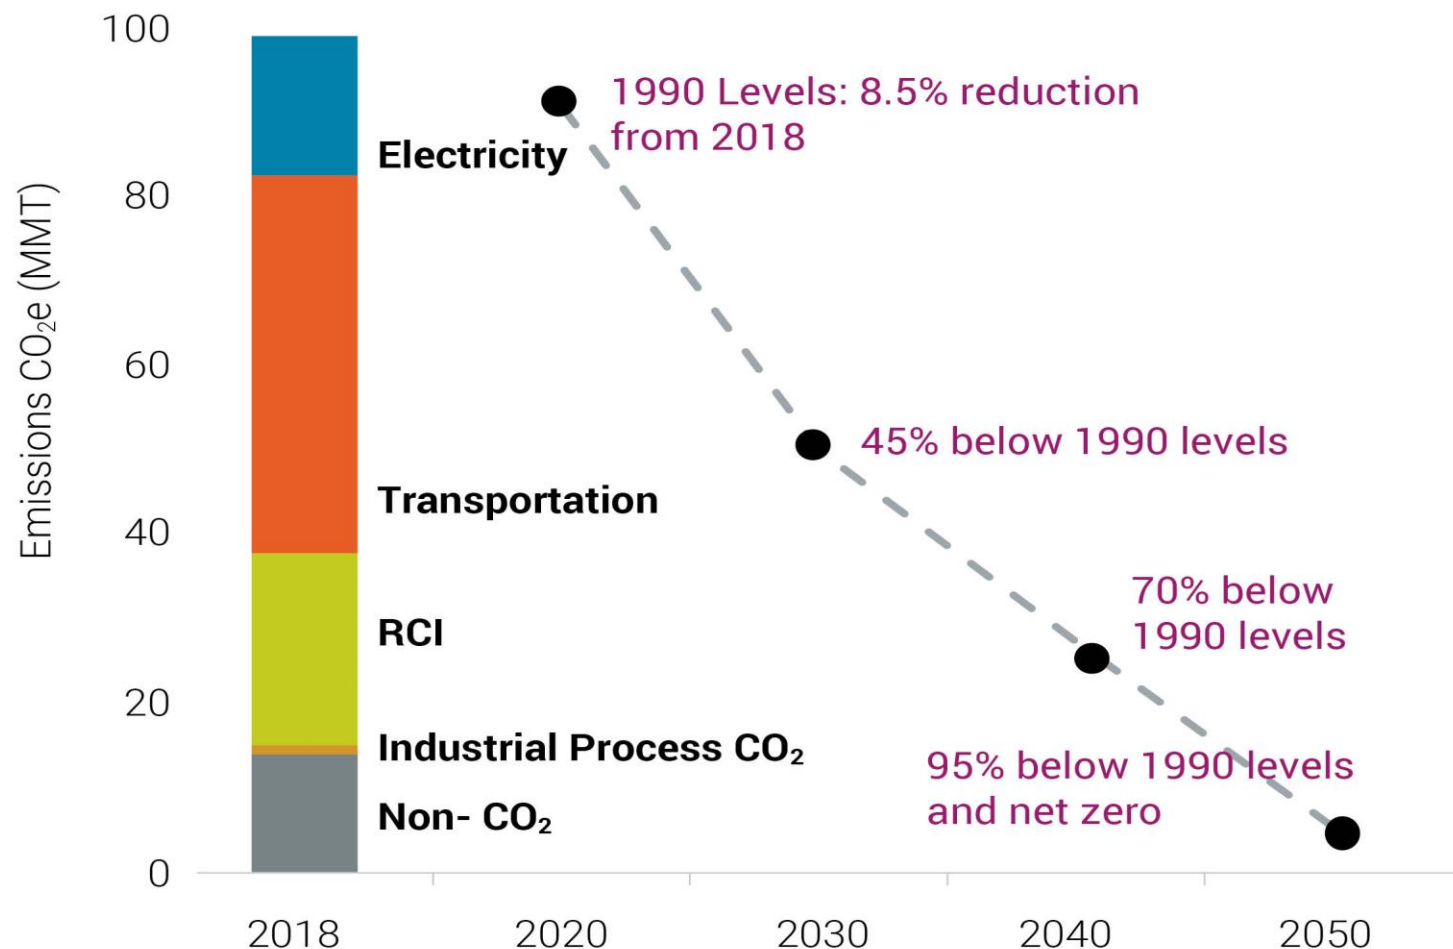

# Equity and Workforce Implications

- Regional equity (rural vs. urban)
- Addressing existing environmental/racial justice inequities
- Who makes the decisions about cost distribution and who benefits?
- What jobs are gained, and which are lost?
- How are people compensated for loss?

# Washington State Energy Strategy—December 2020

# Transforming Washington's Energy System

## Washington State's 2030 Challenge:

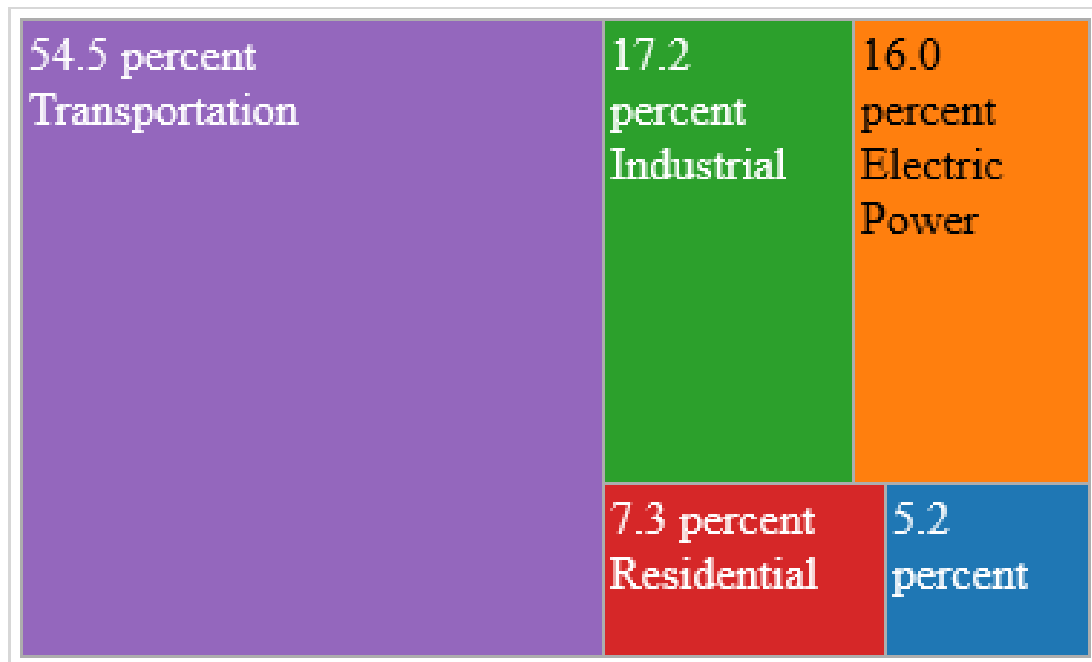

- **53% Reduction in Emissions in less than a decade**

Source: Washington State Department of Ecology and Washington State.

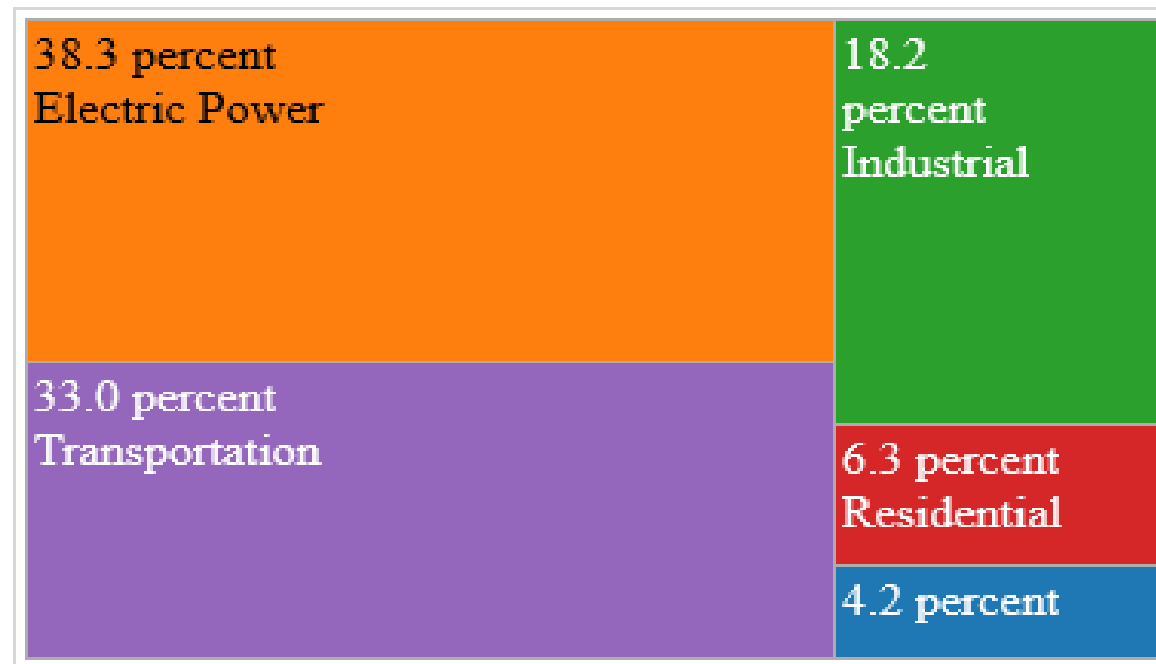

Appendix A –Deep Decarbonization Pathways Modeling Technical Report, December 11, 2020 (p. 15).

# Washington's Very Clean Electric Grid

Washington State

United States

# What Did We Want to Know?

- **What is the impact of rapid and aggressive electrification** of energy systems?
- **What if we don't** electrify transportation as quickly as required?
- **What happens if we retain gas** instead of electrifying buildings?
- **What if transmission expansion is limited** due to siting or permitting?
- **What if policies or behavior change** (i.e., more telecommuting after Covid) lower demand?

# What Did We Learn?

- **To Meet the State's 2030 GHG Targets**
  - Deep energy efficiency to reduce energy use
  - Clean electricity grid by 2030
  - Electrifying as many energy end uses as practical
  - Accelerating clean fuels industry critical
  - Regional approach required

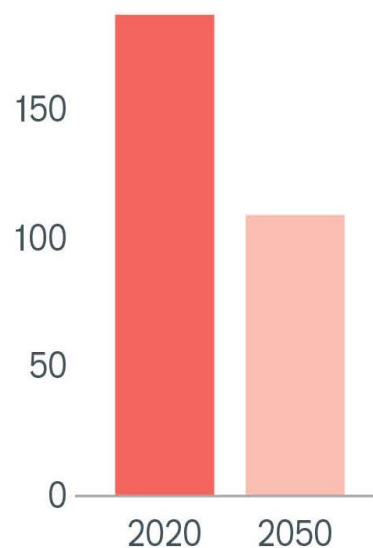

# Washington Deep Decarbonization Pathways

## Energy Efficiency

Energy Consumption  
(Gigajoules/person)

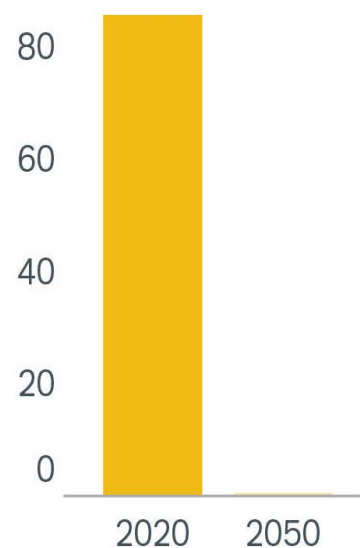

Gigajoules/person

## Clean Electricity

Electricity Carbon  
Intensity  
(Grams CO<sub>2</sub> per kWh)

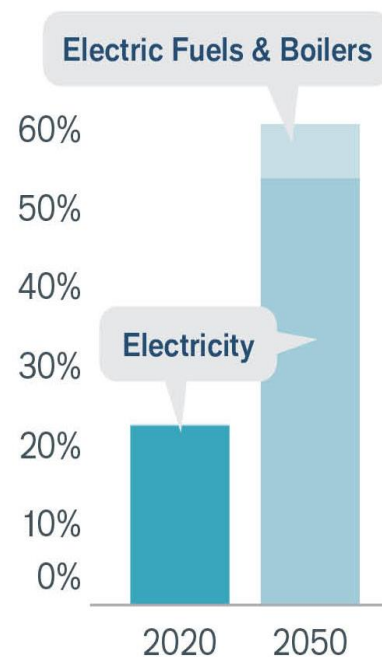

Grams CO<sub>2</sub>/kWh

## Electrification

Electricity Share of  
Total Energy  
(% of Final Energy)

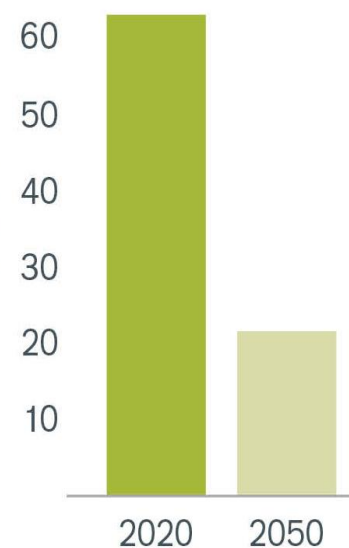

% of Final Energy

## Clean Fuels

Fuels Carbon Intensity  
(kG/MMBtu)

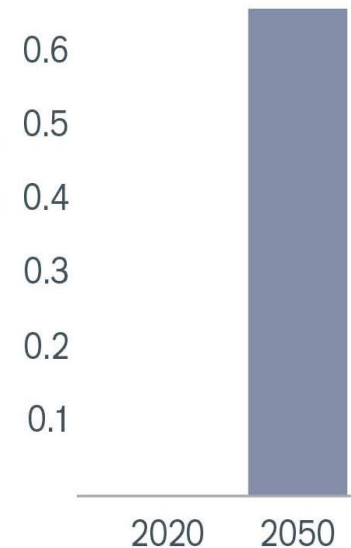

kG/MMBtu

## Carbon Sequestration

(Million tonnes CO<sub>2</sub>)

Million tonnes CO<sub>2</sub>

# Common Findings

# Common Findings across Decarbonization Scenarios

- Greater regional coordination required to facilitate clean energy transfers across the West
- Strengthened/expanded Western grid needed to take advantage of resource and geographic diversity
- Large build of solar in the Southwest and wind in the inland states (MT, WY)
- A large clean fuels industry developed based on biofuels and hydrogen from electrolysis
- Electrification of buildings and transportation

# Many Issues to Explore—All with Equity Lens

- Distributed energy resources (equity; transmission & renewables siting issues)
- Barriers to electrifying transport
- Removing pipeline gas (grid & buildings)
- Liquid fuels (use of biomass/biofuels)
- Electricity load (resource adequacy & reliability)
- Economic impacts (jobs & cost distribution)
- Clean energy industrial policy

# CETI 2022 Programs

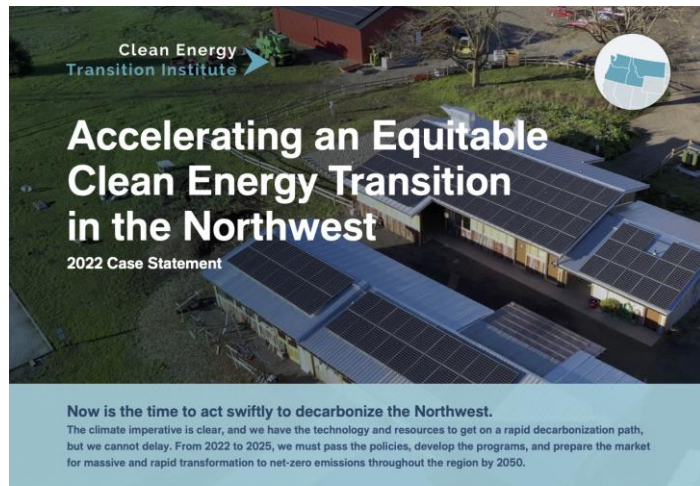

# Current Institute Programs

- **Operation 2030**
  - Scaling building decarbonization in Washington state
- **Northwest Clean Energy Atlas**
  - Interactive dashboard of decarbonization visualizations in the Northwest
- **Clean Materials Manufacturing**
  - Analysis (May); Summit (June)
- **Clean Energy and Northwest Rural Communities**
  - Rural community-defined decarbonization
  - Claiming Power: video stories of rural clean energy
- **Net-Zero Northwest**
  - Decarbonization pathways to 2030 + jobs analysis

# Clean Energy Transition Impact 2018-2021

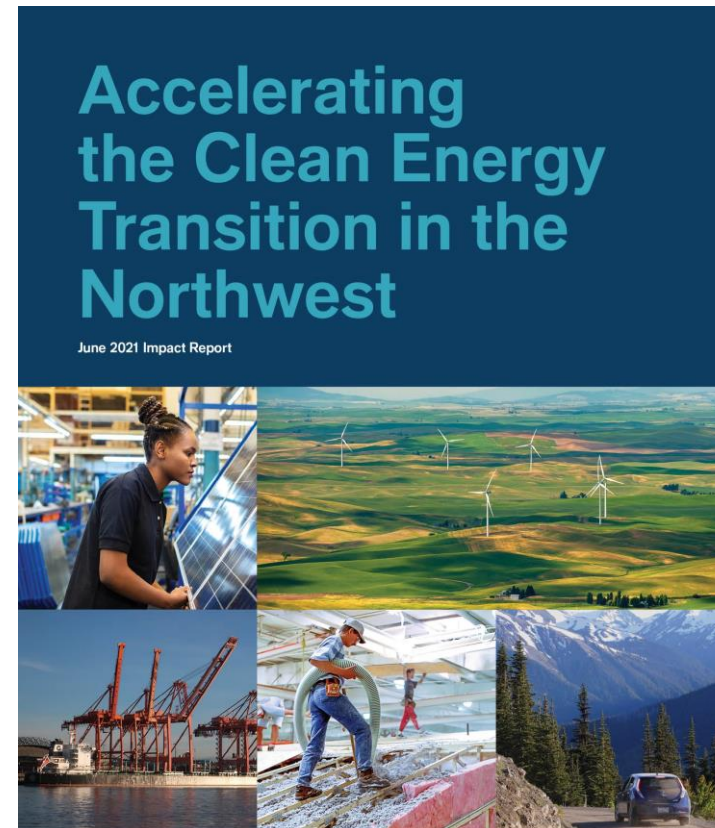

## ➤ Download our Case Statement

- Our Vision** ■ Accelerate the transition to a clean energy economy in the Northwest
- Our Approach** ■ Use an independent, systemic, economy-wide lens to advance technical, economic, and equitable decarbonization strategies
- Our Role** ■ Provide unbiased research and analytics on the pathways to a clean energy economy  
 ■ Offer an information clearinghouse for fact-based analysis and solutions  
 ■ Convene diverse stakeholders to address the opportunities, risks, and trade-offs of carbon emission-reduction approaches
- Our Impact** ■ Developed the analysis to guide creation of the programs, policies, and market transformation that will scale net-zero emissions buildings by 2050 with **Operation 2030**  
 ■ Analyzed the **industrial emissions** for pulp and paper; refineries; wood products; food production chemicals; cement; aerospace manufacturing; and glass, and outlined their decarbonization strategies  
 ■ Created the **Northwest Clean Energy Atlas** to enable citizens and policymakers to understand decarbonization in the context of the Northwest energy landscape

# Questions & Answers

# Research and Analytics to Support Policymakers

2019

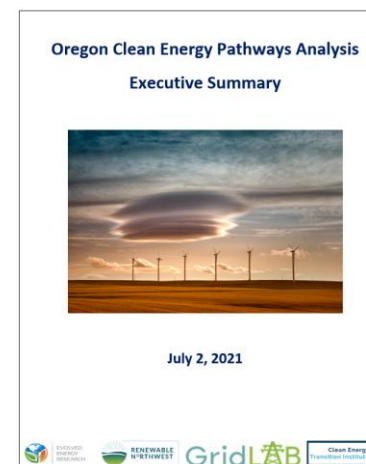

2020

2021

2021

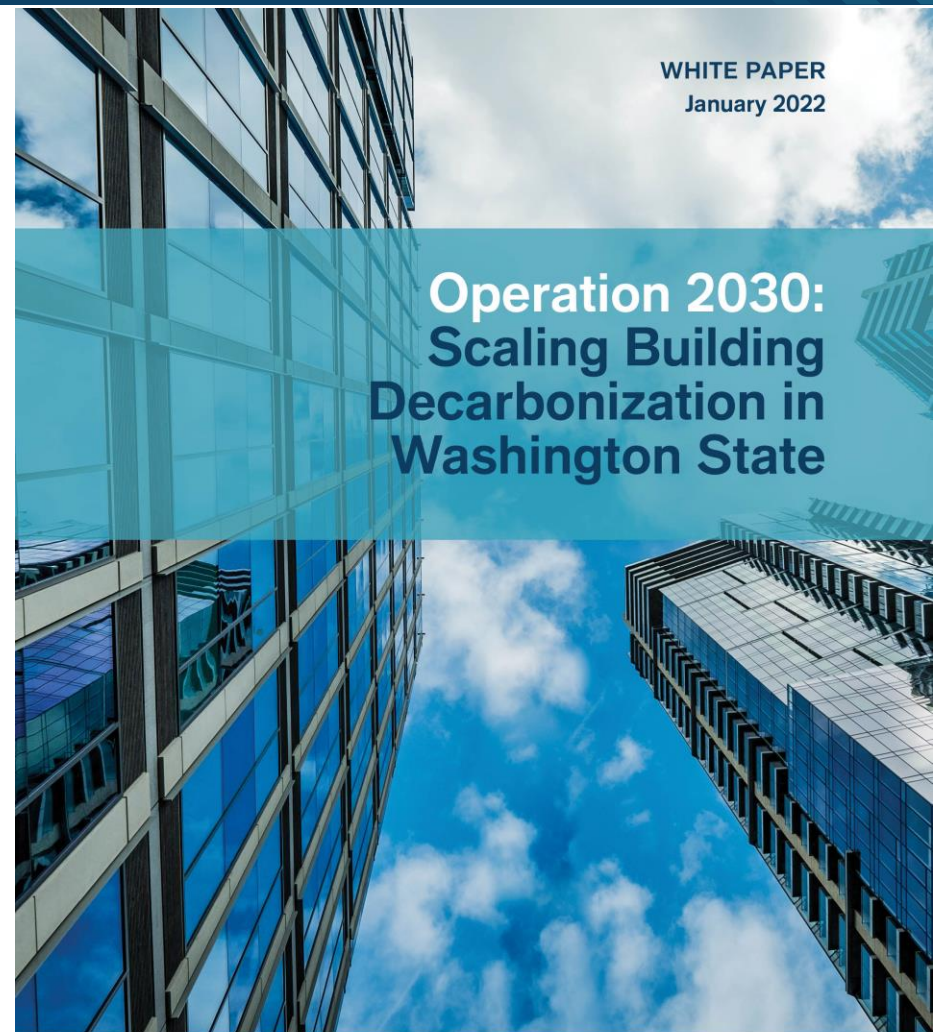

2022

- First economy-wide deep decarbonization study mapped to the Northwest's economic & institutional realities
- First regional de-carbonization study in nation
- Provided technical analysis for a chapter in the Montana Climate Solutions Council Plan
- Presented to Montana stakeholders in 2019, 2020, & 2021
- Provided technical and economic analysis for the 2021 Washington State Energy Strategy
- Roadmap to get WA on the path to net zero over next decade
- Examined technical and economic implications of accelerating decarbonization in OR
- Results informed 2021 OR clean energy standard bill
- Charts the targets and requirements for how Washington can scale building decarbonization by 2030
- Released January 5, 2022

# Operation 2030 Project

- Independent analysis of data from the Washington 2021 State Energy Strategy deep decarbonization modeling
- Focuses on multi-level ramp up required to take building decarbonization to scale by 2030
- White paper
- Forums

# Clean Materials Manufacturing

- Analysis of six key manufacturing sectors in Washington state
  - Emissions profiles
  - Decarbonization pathways
  - Workforce
- In advance of June 23 & June 28 Summit

Pulp and Paper

Wood Products

Concrete and Cement

Glass

Aluminum

Iron and Steel

# Northwest Clean Energy Atlas

Northwest Clean Energy Atlas

ALL VISUALIZATIONS

## Explore the Northwest Clean Energy Atlas

Emissions →

Energy →

Utilities →

The Northwest Clean Energy Atlas provides regional stakeholders interactive tools to explore energy data relevant to deep decarbonization in Idaho, Montana, Oregon, and Washington.
