

PAPUT® SYSTEM

Ultra-portable and lightweight system engineered to simplify on-wing APU testing & troubleshooting

Troubleshoot and isolate faults without removal of the APU

Eliminate unnecessary repair costs

Avoid catastrophic failure

Trend APU performance

Extend on-wing APU life

Full data acquisition capabilities

Enables user to perform a full, recordable diagnostic test on APU EGT, RPM (% and actual), 35% & 95% speed indicators, Oil Pressure, Ambient Temperature, Atmospheric Pressure, Main Volts, Main Amps, and full BITE indication.

Connected and operational in minutes!

①

Connect the DAQ Module to the APU or ESU

②

Connect the USB to the fully digital, ruggedized tablet

③

Run the data acquisition program
