- Product Management
- Product Operations
- User Research
- Executive Team Navigation

#### DEVELOPMENT

- Comp Sci Background
- Git / VCS
- HTML / CSS / SASS
- Polymer / Vue / Ember
- Arduino/IoT Hardware

### RELEVANT EXPERIENCE

#### VP of Product at Neighborly Networks (Broadband) | 2019-Present

Responsible for all design, product management, marketing, and engineering personnel working on our consumer-facing applications. As a member of the executive staff, my roles involve defining the product strategy for the company, building process and personal advancement within teams, and working to deliver quality experiences across everything the company undertakes.

#### Director of Product Design at Neighborly Corp. (Fintech) | 2017-2019

Responsible for all design members and tooling, including the design and brand systems and front-end UI system. I also led product initiatives as a PM managing engineering, design, business, and compliance folks, developing iterative features as well as 0-1 products for launch. Many of the business and product strategy decisions at the company fell to me as I worked closely with the executive staff to determine direction.

#### Principal Designer at Mode3 (Consulting) | 2016-2017

I worked on rapid prototyping projects as part of a skunkworks group retained by enterprise companies to jumpstart internal innovation. Projects were typically 3 weeks long and involved creating product MVPs from scratch in order to find market fit. I contributed full product vision, research, UI creation, and development for web and hybrid iOS/Android in subjects ranging from medical triage, lifestyle, chatbots, and insurance.

**COMMON TOOLS** - Figma, Adobe CC, Framer, Mapbox, Sketch + Abstract, Cinema 4D + After Effects
