

Walkway covers add an aesthetically pleasing and inviting element to a building, while also providing protection and shade from outdoor elements for customers and employees. Each of our custom projects is built to allow flexibility for various style and installation options. For concealed water flow, our walkway covers are equipped with an internal drainage system using beams, columns, and downspouts. They're engineered in-house to withstand all conditions including snowdrift loading and hurricane-force winds. From over 3,000 different powder coat finishes to different decking options, we have the resources to build even the most challenging walkway cover design.

### The Difference

- One-on-one design & coordination
- Bidding, budget, & contract assistance
- Scope related coordination
- Real-time & on-site problem solving
- End client maintenance offered

### Design Features

- Engineering
- Deck Options
- Fascia Options
- Variety of Finishes
- Internal Drainage
- Architectural Flexibility
- Welded End Plates & Water Stops
- Hidden Fastening Systems & Connections

### Application Types

- K-12 & Higher Education
- Commercial Buildings
- Entrances/Storefronts
- Healthcare Buildings
- Religious Buildings
- Retail Centers

### Components

All components are 6063-T6, 6005-T5, & 6061-T6 extruded aluminum alloy (except c-fascia & composite fascia).

### Finishes/Color

1. Anodized/Clear, Medium, Bronze, Dark Bronze, & Champagne
2. Polyester Baked Enamel (recommended for deck only)
3. Fluoropolymer 2-coat Kynar
