# Cleanpower Protect 30

Complexing and corrosion protecting agent for water-bearing circulation systems

- ✓ Excellent corrosion protection properties
- ✓ Prevents incrustations
- ✓ Economical in use
- ✓ Protects non-ferrous metals

**Cleanpower Protect 30** is a specially developed product to prevent water circuits from corrosion and formation of incrustations. It has excellent complexing properties against calcium and magnesium ions in a wide range of pH. Formed metal complexes highly soluble in water and prevent precipitation even at a high water hardness of 40°dH.

**Cleanpower Protect 30** has to be regularly added in the prescribed amount. In this case it guarantees a perfect performance of the systems treated and prevents deposition of various incrustations, reducing the efficiency of the heat exchange in the systems.

**Applicable concentration:** Depending on the system, a concentration between 0.7 and 1.0 % is perfectly adequate to ensure an excellent corrosion protection.
