SECTION 1: Identification

1.1. Identification
Product name: 10xx Series Alloys

1.2. Relevant identified uses of the substance or mixture and uses advised against
Use of the substance/mixture: Manufacturing

1.3. Details of the supplier of the safety data sheet
Magellan Corporation
1650 Lake Cook Rd.
Deerfield, IL 60015

1.4. Emergency telephone number
Emergency number: 847-205-1155

SECTION 2: Hazard(s) identification

2.1. Classification of the substance or mixture
GHS US classification
Not classified

2.2. Label elements
Note: Steel products in their solid state under normal conditions, do not present an inhalation, ingestion or skin hazard. However, operations resulting in fume or particulate formation such as welding, sawing, brazing, grinding and machining may present health hazards. Molten steel also is hazardous.

GHS US labeling
No labeling applicable

2.3. Other hazards
No additional information available

2.4. Unknown acute toxicity (GHS US)
Not applicable

SECTION 3: Composition/Information on ingredients

3.1. Substances
Not applicable

3.2. Mixtures

Full text of hazard classes and H-statements: see section 16

SECTION 4: First aid measures

4.1. Description of first aid measures

First-aid measures after inhalation: Move to fresh air. If not breathing, administer artificial respiration. If breathing is difficult, give oxygen. SEEK MEDICAL ATTENTION.

First-aid measures after skin contact: Flush contaminated skin with plenty of water. Remove contaminated clothing and shoes. Wash contaminated clothing thoroughly with water before removing it, or wear gloves. Continue to rinse for at least 10 minutes.

First-aid measures after eye contact: Flush eyes with plenty of water or saline for at least 15 minutes. If irritation develops, SEEK MEDICAL ATTENTION.

First-aid measures after ingestion: Never give fluids or induce vomiting if the victim is unconscious or having convulsions. SEEK MEDICAL ATTENTION.
### 4.2. Most important symptoms and effects, both acute and delayed

#### Symptoms/injuries after inhalation
Dusts may cause irritation of the nose, throat, and lungs. Excessive inhalation of metallic fumes and dusts may result in metal fume fever, an influenza-like illness. It is characterized by a sweet or metallic taste in the mouth, accompanied by dryness and irritation of the throat, cough, shortness of breath, pulmonary edema, general malaise, weakness, fatigue, muscle and joint pains, blurred vision, fever and chills. Typical symptoms last from 12 to 48 hours.

#### Symptoms/injuries after skin contact
Dusts or particulates may cause mechanical irritation due to abrasion. Coated steel may cause skin irritation in sensitive individuals (see Section 16 for additional information.) Some components in this product are capable of causing an allergic reaction, possibly resulting in burning, itching and skin eruptions. Contact with heated material may cause thermal burns.

#### Symptoms/injuries after eye contact
Dusts or particulates may cause mechanical irritation including pain, tearing, and redness. Scratching of the cornea can occur if eye is rubbed. Fumes may be irritating. Contact with the heated material may cause thermal burns.

#### Symptoms/injuries after ingestion
Not expected to be acutely toxic via ingestion based on the physical and chemical properties of the product. Swallowing of excessive amounts of the dust may cause irritation, nausea, and diarrhea.

### 4.3. Indication of any immediate medical attention and special treatment needed
No additional information available

### SECTION 5: Firefighting measures

#### 5.1. Extinguishing media

**Suitable extinguishing media:**
Use Class D extinguishing agents on dusts, fines or molten metal. Use coarse water spray on chips and turnings.

**Unsuitable extinguishing media:**
None.

#### 5.2. Special hazards arising from the substance or mixture

**Fire hazard:**
Small chips, turnings, dust and fines from processing may be readily ignitable.

**Explosion hazard:**
Dust or fines dispersed in the air can be explosive. Even a minor dust cloud can explode violently. Chips, dust or fines in contact with water can generate flammable/explosive hydrogen gas. Hydrogen gas could present an explosion hazard in confined or poorly ventilated spaces. Fines and dust in contact with certain metal oxides (e.g., rust). Molten metal in contact with water/moisture or other metal oxides (e.g., rust). Moisture entrapped by molten metal can be explosive.

#### 5.3. Advice for firefighters

**Protection during firefighting:**
Firefighters should wear full protective gear.

### SECTION 6: Accidental release measures

#### 6.1. Personal precautions, protective equipment and emergency procedures

**General measures:**
Avoid contact with the skin and the eyes.

**6.1.1. For non-emergency personnel**
No additional information available

**6.1.2. For emergency responders**
No additional information available

#### 6.2. Environmental precautions
None.

**6.3. Methods and material for containment and cleaning up**

**For containment:**
No special measures required.

**Methods for cleaning up:**
Fine turnings and small chips should be swept or vacuumed and placed into appropriate disposable containers. Keep fine dust or powder away from sources of ignition. Scrap should be reclaimed for recycling. Prevent materials from entering drains, sewers, or waterways. Discard any product, residue, disposable container or liner in full compliance with federal, state, and local regulations.

#### 6.4. Reference to other sections
No additional information available
**SECTION 7: Handling and storage**

### 7.1. Precautions for safe handling

**Precautions for safe handling**: Avoid generating dust. Avoid contact with sharp edges or heated metal. If processing of these products includes operations where dust or extremely fine particulate is generated, obtain and follow the safety procedures and equipment guides contained in National Fire Protection Association (NFPA) guidelines. Cover and reseal partially empty containers. Use non-sparking handling equipment. Provide grounding and bonding where necessary to prevent accumulation of static charges during dust handling and transfer operations. Local ventilation and vacuum systems must be designed to handle explosive dusts. Dry vacuums and electrostatic precipitators must not be used. Avoid all ignition sources. Good housekeeping practices must be maintained.

### 7.2. Conditions for safe storage, including any incompatibilities

**Storage conditions**: Product should be kept dry.

**SECTION 8: Exposure controls/personal protection**

#### 8.1. Control parameters

**Phosphorus elemental (7723-14-0)**

Not applicable

#### 8.2. Exposure controls

**Appropriate engineering controls**: Local exhaust and general ventilation must be adequate to meet exposure standards.

**Hand protection**: Wear impervious gloves to avoid repeated or prolonged skin contact with residual oils and to avoid any skin injury.

**Eye protection**: Wear safety glasses/goggles to avoid eye contact.

**Skin and body protection**: Wear suitable protective clothing.

**Respiratory protection**: If airborne concentrations are above the applicable exposure limits, use NIOSH approved respiratory protection.
Thermal hazard protection: Personnel who handle and work with molten metal should utilize primary protective clothing like face shields, fire resistant tapper's jackets, leggings, spats and similar equipment to prevent burn injuries. In addition to primary protection, secondary or day-to-day work clothing that is fire resistant and sheds metal splash is recommended for use with molten metal.

General: Minimize breathing oil vapors and mist. Remove oil contaminated clothing; launder or dry-clean before reuse. Remove oil contaminated shoes and thoroughly clean and dry before reuse. Cleanse skin thoroughly after contact, before breaks and meals, and at the end of the work period. Oil coating is readily removed from skin with waterless hand cleaners followed by a thorough washing with soap and water.

#### 9.2 Other information

No additional information available

### SECTION 10: Stability and reactivity

#### 10.1 Reactivity

No additional information available

#### 10.2 Chemical stability

Stable under normal conditions of use, storage, and transportation as shipped.

#### 10.3 Possibility of hazardous reactions

Will not occur.

#### 10.4 Conditions to avoid

Steel at temperatures above the melting point may liberate fumes containing oxides of iron and alloying elements. Avoid generation of airborne fume.

#### 10.5 Incompatible materials

Reacts with strong acids to form hydrogen gas. Do not store near oxidizers.

#### 10.6 Hazardous decomposition products

Metallic fumes may be produced during welding, burning, grinding, and possibly machining.
SECTION 11: Toxicological information

11.1. Information on toxicological effects

General Product Information

The primary component of this product is iron. Long-term exposure to iron dusts or fumes can result in a condition called siderosis which is considered to be a benign pneumoconiosis. Symptoms may include chronic bronchitis, emphysema, and shortness of breath upon exertion. Penetration of iron particles in the skin or eye may cause an exogenous or ocular siderosis which may be characterized by a red-brown pigmentation of the affected area. Ingestion overexposures to iron may affect the gastrointestinal, nervous, and hematopoietic system and the liver.

When this product is welded, fumes are generated. Welding fumes may be different in composition from the original welding product, with the chief component being ordinary oxides of the metal being welded. Chronic health effects (including cancer) have been associated with the fumes and dusts of individual component metals (see above), and welding fumes as a general category have been listed by IARC as a carcinogen (Group 2B). There is also limited evidence that welding fumes may cause adverse reproductive and fetal effects. Evidence is stronger where welding materials contain known reproductive toxins, e.g., lead which may be present in the coating material of this product.

Breathing fumes or dusts of this product may result in metal fume fever, which is an illness produced by inhaling metal oxides. These oxides are produced by heating various metals including magnesium, manganese, chromium, aluminum, and iron. This product may contain small amounts of manganese. Prolonged exposure to manganese dusts or fumes is associated with "manganism", a Parkinson-like syndrome characterized by a variety of neurological symptoms including muscle spasms, gait disturbances, tremors, and psychoses.

Acute toxicity

Iron oxide (Fe2O3) (1309-37-1)
LD50 oral rat > 10000 mg/kg

Carbon (7440-44-0)
LD50 oral rat > 10000 mg/kg

Sulfur (7704-34-9)
LD50 oral rat > 3000 mg/kg
LD50 dermal rabbit > 2000 mg/kg
LC50 inhalation rat (mg/l) > 9.23 mg/l/4h

Manganese (7439-96-5)
LD50 oral rat 9 g/kg
ATE US (oral) 9000000 mg/kg

Phosphorus elemental (7723-14-0)
LD50 oral rat 3030 µg/kg
LD50 dermal rat 100 mg/kg
LC50 inhalation rat (mg/l) 4.3 mg/l (Exposure time: 1 h)

Skin corrosion/irritation : Not classified
Serious eye damage/irritation : Not classified
Respiratory or skin sensitization : Not classified
Germ cell mutagenicity : Not classified
Carcinogenicity : Not classified

Iron oxide (Fe2O3) (1309-37-1)
IARC group 3 - Not classifiable

Reproductive toxicity : Not classified
STOT-single exposure : Not classified
STOT-repeated exposure : Not classified
Aspiration hazard : Not classified
