# Rapid Prototyping Services for Oracle Retail

## CHALLENGE

Third-party software implementations face the challenge that critical solution decisions must be locked in during configuration sessions – before either Business or IT stakeholders have more than a cursory understanding of the impacts of those decisions.

And once these decisions are made they are likely not to be fully validated until Design, Build or even Test related activities are in progress. Impacts may only become apparent once solution and business process design are melded with mapped organisational data sources.

**This is not a recipe for good project outcomes.**

There is a direct correlation between the lateness of a change or nuancing of a solution decision and the cascading impact of that change.

The correlation extends to timeline and budgetary impact, as contingency for both is eroded. A tipping point then occurs at which the impacts of a change on project delivery and cost outweigh the benefits.

## SOLUTION

At elfware we breathe life into your Oracle Retail solutions through the early and iterative provision of your data in Oracle's software. We provide early visibility based on an initial set of high level assumptions. This highlights solution gaps which are resolved into options, proposals and decisions. We then rapidly visualise these through an evolutionary prototyping process for validation.

With the availability of the following we can now bring this evolutionary prototyping capability to Oracle Retail:

For defining and maintaining...

 System configuration settings.

 Mapping from disparate legacy data sources into MOM

elfware Oracle Retail  
Source to Target data  
mapping templates

For...

 Understanding legacy Integration impacts

 Legacy Reporting validation.

elfware Oracle Retail  
Target to Source reverse  
mapping templates

For push button generation of...

 Data Configuration and Conversion Utilities.

 Reverse Mapping utilities.

 Orchestration scripts for deployment and dependency Management.

elfware Automation and  
Orchestration engine

Lack of access to representative project environments often delays project kick-off and ongoing activities. This may be due to hardware commissioning, bandwidth or skills barriers. Ask elfware about:

#### Oracle Retail On Demand Environments

For short term or project availability of prototype and non-production environments

Oracle Retail On  
Demand Environments

Prototype deliverables from the elfware Automation and Orchestration engine continue to provide value well beyond solution sign-off through mapping, migration and test functionality.

These deliverables evolve through all phases of your project encompassing complete migration and cutover automation including test support, data validation and reconciliation.

Project Delivery
