AI specialist

Course Description

The main content of the course
The course prepares the participants to independently conduct leadership and implementation of AI within an organization.
At the end of the course, participants will have a deep understanding of what AI is, collection data, pattern optimization, different AI applications that see today and how AI can be applied to different businesses.

To understand your business and use, a computer-driven AI is a must today. Through data collection and analytical methods, AI can develop your business. It does this by understanding what information organizations have, how can I collect and store it, how you systematize can use the information and automated processes. With these methods, you can not only develop effective tools in operations but also intelligence that develops, learns and becomes more intelligent as it does.

Course Objectives
After completing the course, the participant should have the following knowledge, skills, and competences:
Knowledge
* Wide understanding of AI
* Data collection
* Machine learning
* Neural network
* Evaluate AI and continue to increase AI intelligence
* Apply data in real-life situations
* AI project management within operations
* Image recognition
* Pattern optimization
* Emotional recognition AI
Skills
* Methods for project management of AI operations
* Be able to communicate with programmers around AI
* Understand and apply different AI types

Optional add ons to course
* AI in healthcare
* AI in fintech
* AI in marketing

Learning materials
For the course, participants have access to the Gaddr AI to directly apply their learnings of a live working broad AI solution covering a wide range of technology.

Certification
During the end of the course, the participant will take an exam test which if successful, certifies the participant as a Gaddr AI leader.
