

The X-Degree Compatibility Model

XDC Model

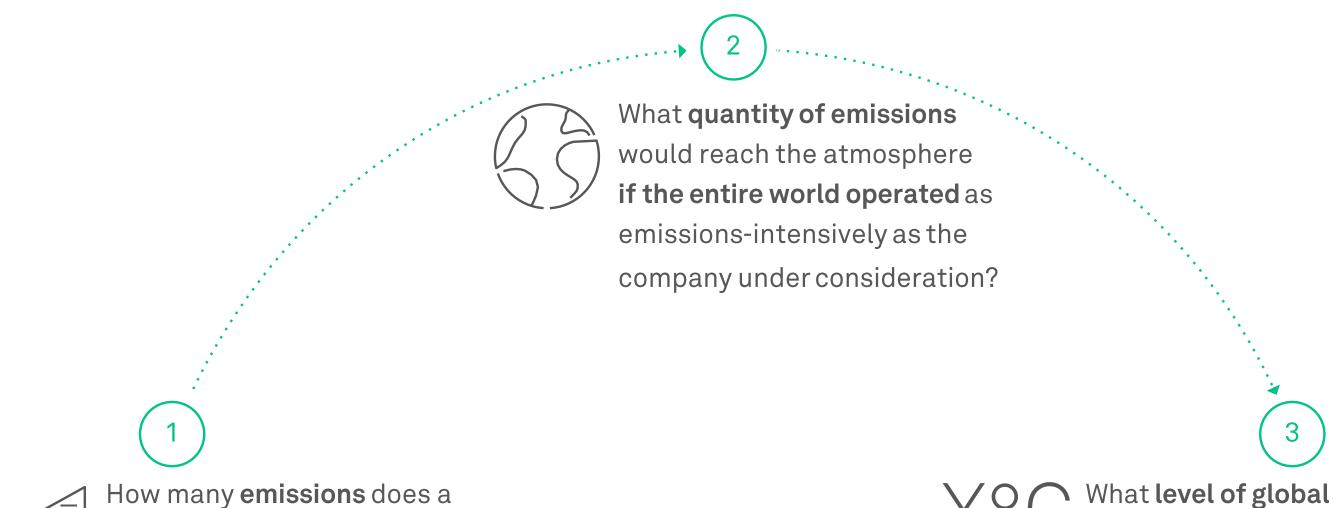

The XDC Model is an economic climate impact model which analyses the degree of global warming by 2050 that an economic entity is compatible with under various scenarios.

right, based onscience 2 27 October 2020

XDC Model

Process

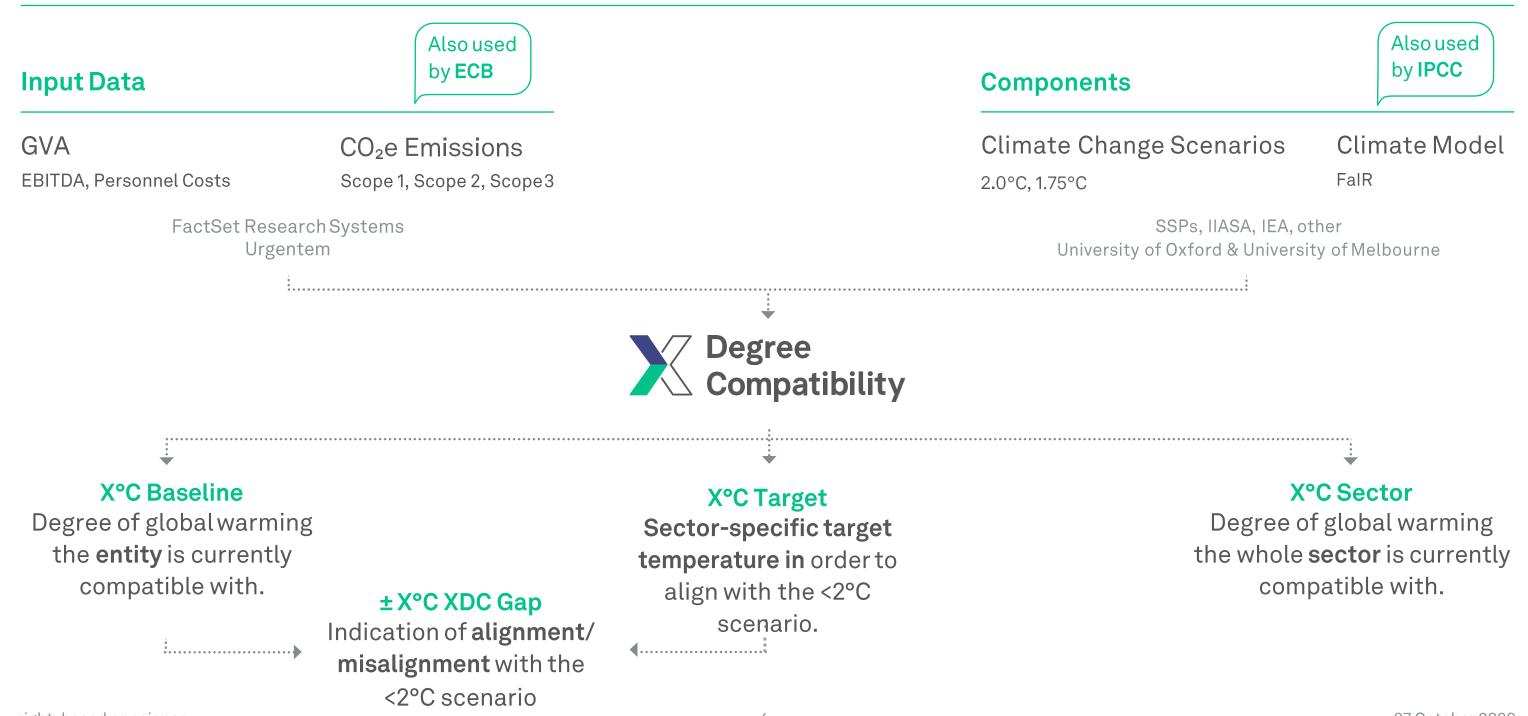

How many emissions does a company need to generate 1M€ in GVA under a given scenario from a base year to 2050?

What level of global warming would we expect by 2050 if that amount of emissions reached the atmosphere?

XDC Model

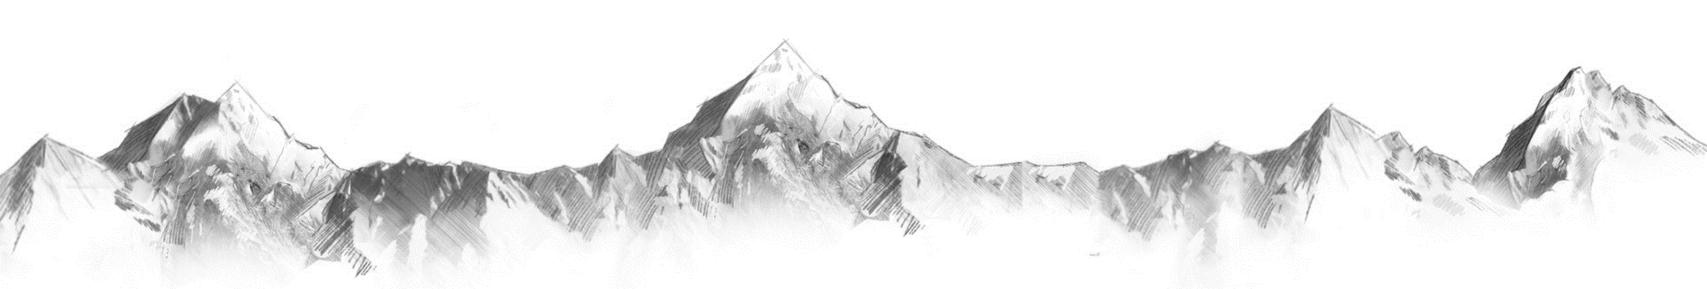

Input & Output
