

D&T Company Statements and Policies

D&T Mission Statement

Convergence, Contribution, Challenge

D&T Vision

Become a “World Best Imaging Solution Provider”.

Quality Policy

D&T aims to satisfy customer requirements by providing quality products and services which meet or exceed their expectations. Quality is a commitment D&T makes on a continuous basis. Regular improvements, preventive activities, and staff training are performed in accordance to internal quality manuals, and upon the practises requested by D&T’s customers. D&T continuously strives to improve its quality management and performance, and maintains effective quality managements systems for all products.

Environment Protection Policy

D&T observes all legal regulations related to environmental and quality management. D&T strives to establish eco-friendly management and procurement systems, and continuously improves upon those efforts. D&T prioritizes the resolution of environmental issues through the entire production process, including: procurement, manufacturing, logistics, utilization, and disposition. D&T tries its best to minimize on-site energy consumption and maximize material recycling.

Conflict Minerals Policy

D&T is committed to the purchase of ethically sourced raw materials, subassemblies and supplies which are known not to contain conflict minerals. D&T does not directly source minerals from mines in the DRC or elsewhere. D&T’s material supply chain consists of many tiers before reaching direct suppliers, including: mines, traders, exporters, smelters, refiners, alloy producers and component manufacturers. D&T continuously engages with other stakeholders to ensure due diligence and adherence to ethical sourcing. D&T encourages its suppliers to take measures with their sub-suppliers to ensure alignment and traceability throughout the supply chain, and to continue to support mines and smelters which have been verified as conflict free.
