

SHOWER DOORS

Alpha on piece door

Alpha Deluxe with "Chrome" style frame

THE ALPHA RANGE

The Alpha range is manufactured as either a one-piece door with a frame completely surrounding the glass using 4mm safety glass or as a one or two piece partly framed using 6mm safety glass. The Alpha deluxe door has a "D" handle and can be manufactured in "chrome" style, bright anodising.

Alpha doors all have an integrated magnetic closing system, splashguard under the door and a self-draining strip to channel any water on the door back inside the shower.

Beta Door and 2 Returns on Corner Tray

THE BETA RANGE

The Beta range of pivot shower doors is manufactured in 6mm toughened safety glass. The main difference between these shower doors and the Alpha range, is that the pivots are attached through the glass. This allows us to manufacture these doors without a top or bottom rail on the glass. This is an attractive "look" that appeals to many.

Delta door on level entry shower

Delta door & two returns

THE DELTA RANGE

The Delta range of pivot shower doors incorporates European inspired design. It features no sill on the bottom, allowing easy access, (especially suitable for wheel chair access) and particularly suits completely tiled bathrooms.
