

SPEAK2 FOR MATERNITY SERVICE CARE

THE CONCEPT

What is the best possible experience for labor and delivery? A nurturing environment. More space and comfort for visitors, with flexible hours? Availability of lactation specialists? How about jacuzzi and hotel-style room service. And maybe even a 24/7 concierge? If that seems expensive and unrealistic, think again. With Speak2, there is a full-time concierge ready to serve you for your entire stay. Just ask for what you need, and the right people are notified. You get updates and reminders, along with dozens of other amenities like controlling the environment and TV, listening to music, sending regular updates to friends and family, making calls, and more. All by just speaking to your personal concierge.

There are 252 million Americans that have a smart speaker with voice recognition software. Most use it for very topical use: What is the weather? Play me this song. Turn off the light.

Receiving service via a voice command means patients will not need to understand complicated remotes, look up extensions or worry about disturbing a nurse. Speak2 behaves as the patient's personal concierge.

There are 62,10 total hospitals in the U.S. There are 931,203 total staffed beds. Varying from maternity care to ambulatory care, Voice technology can add enormous value to patients and health care professionals.

WHY SPEAK2?

We are the voice command platform for Health Care. We are the decision-tree experts that enable the real-time delivery of services within your health care facility. Speak2 improves efficiency, lowers cost, and provides better service to your patients and residents. Speak2 delivers patient satisfaction.

THE BENEFITS

Patient Satisfaction

Real-Time Dashboards

Lower Costs

Integration with Epic
