

Tattile ANPR

Everything required to capture, recognise, interrogate and output number plate information is embedded into the Tattile camera head negating the need for specific licences or additional equipment. Tattile has various versions of cameras depending on the application at hand, such as mobile, traffic lights or high speed, and which country the camera will operate in.

Server side

Number plate data and images captured and processed on Tattile cameras is sent to, stored in, and accessed from the Wavestore metadata engine, which is an option you must include when specifying your Wavestore VMS edition.

The Wavestore VMS can be installed on Wavestore's own range of servers, or on a host of compatible third-party brands, providing video, data and recording management across the end-customer's site.

Each number plate image is now received instantaneously which enables the operator to quickly verify events as they occur. The Tattile system provides full number plate enrolment, administration, control and management across the end-customer site. Using the Wavestore platform, overview cameras can be easily integrated to provide a situational awareness of the Tattile ANPR cameras.

Client side

Wavestore's WaveView client software application can be installed on multiple client machines to access the Wavestore server(s).

WaveView provides complete live monitoring and playback control of cameras and other devices,

Key features

- Tattile ANPR uses a variety of cameras to detect and read number plates from Europe, North America, South America, Asia, Africa & Indonesia. Tattile is also capable of reading ADR Hazard Identification Numbers (HIN) also known as Kemler Codes. Kemler Codes are displayed on vehicles that are transporting hazardous goods such as oil, petrol and other highly flammable liquids and gases. Using specific cameras Tattile reads these Hazard Identification Numbers (HIN) just like any other number plate, these can then be stored and accessed from the Wavestore metadata engine
- Open VMS platform that unlocks the full potential of your integrated security solution. Easily add technology such as Access Control, Video Analytics and other devices to your system with ease of user control and administration
- Each number plate image is now received instantaneously which enables the operator to quickly verify events as they occur
- Adds powerful post-event search functionality to ANPR applications
- Automate a host of functions, such as open barrier, alert security staff, move cameras etc. for up to 5 number plate lists/groups
- Benefit from adding overview cameras to ANPR cameras, providing better situational awareness

as well as enabling data and number plate images from Tattile cameras to be monitored and controlled from the same screen.

The Tattile camera sends each number plate image instantaneously to the client which can be also associated with an overview cameras, enabling the operator to quickly verify events as they occur.

In addition, it is possible to overlay individual number plate details upon capture to any number of associated cameras. This allows an operator to view live video, search for events or manage triggers linked from access control events either in real time as they happen or via post-event interrogation.

Operators are then able to easily stitch together video from time-synchronised events using Wavestore's 3-click evidential export function. Users are also able to search for specific number plates or number plate groups via WaveView, to quickly bring up event lists and associated video, incorporating IF, AND, OR functionality to search for number plates that have entered a specific entrance, for example.

WAVESTORE INTEGRATES Tattile ANPR

What to order

To enable Tattile Integration with Wavestore's VMS, please order the following for each Wavestore NVR/HVR:

INT-WS-TATTILE-01 - Tattile integration module for full 2-way communication between Wavestore and Tattile. Order one per Wavestore NVR/HVR.

The Tattile integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: info@wavestore.com

About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.

About Tattile

Tattile's Traffic Division creates smartcams for number plate reading (ANPR – Automatic Number Plate Recognition) and road traffic control, used in innovative ITS (Intelligent Transport Systems) for tolling, tracking, access control and enforcement applications.

Its strength is in the company's vocation for innovation, supported by an R&D Team whose expertise in hardware, software and integration allows projects to be satisfied with the very latest technology.

Tattile's Business Growth Strategy was reinforced in November 2012 with an investment made by Ambienta SGR, the largest European private equity fund in the environmental sector.
