PassEntry

PassEntry is a digital access control company. Utilising Near Field Communication (NFC) PassEntry passes are accessible natively within mobile wallets and managed through our cloud-based dashboard.

PassEntry Membership

PassEntry Membership delivers innovative digital membership solutions reducing inefficiencies associated with the production and distribution of physical membership cards.

How It Works

Members simply present their digital card to you as they would a normal plastic card. For advanced verification, the NFC digital pass can be used in conjunction with a PassEntry reader - Physical passes can of course still be used.

Benefits

Eliminate card loss

- Unlike physical cards, digital cards cannot be lost or misplaced

Higher level of security

- Ability to utilise mobile phone security (Face-recognition, Pin, Fingerprint) before access to PassEntry pass is granted

No App installation

- PassEntry passes are accessible natively within iOS and Android devices

Cost and time effective

- Digital passes can be issued electronically saving time and reducing purchase and mailing costs associated with physical cards

Environmentally friendly

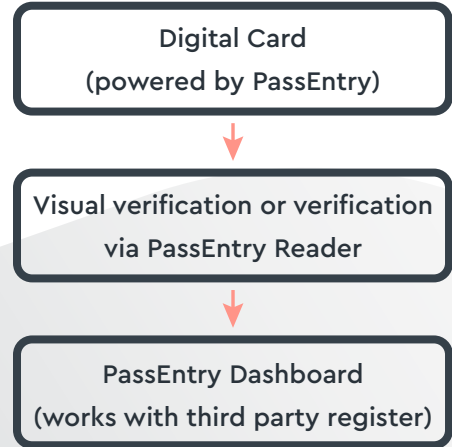

- Eliminate plastic usage and wastage

Unlock new ways of engagement

- Send push notifications to your members

Hygenic

- Reduce the spread of germs

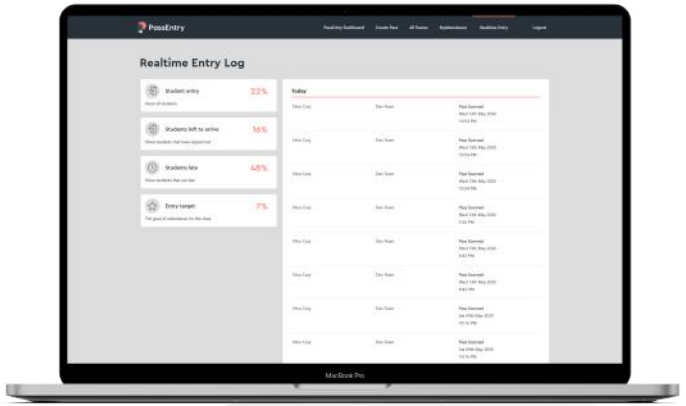

The Software

To receive digital cards, members simply complete a signup form either on your site or via your unique PassEntry signup form hosted on our servers.

Passes are then sent via email within seconds.

To issue digital cards to existing card holders all you need to do is upload your member list to your PassEntry Dashboard or sync your mailing list client such as Mailchimp with the Dashboard and send out your digital cards in bulk.

From within your Dashboard you can issue, edit, revoke and view metrics on your community in addition to sending powerful custom notifications.

The Hardware

For added security, Digital cards can also be verified using a PassEntry reader.

Our compact readers can be both mains and battery powered for increasing flexibility.

Security

PassEntry uses bank level encryption – which is more secure than HID and removes single point of failure.

Smartphones ask for authentication (Pin, Facial recognition, biometric) before allowing users to access PassEntry, adding additional level of security

PassEntry is Ideal for

Members Clubs

- Private Members Clubs
- Golf Clubs
- Nightclubs
- Fitness Clubs

Communities

- Community Loyalty Schemes
- Business Improvement Districts
- Associations

Resorts / Attractions

- Theme Parks
