PassEntry

PassEntry

PassEntry is a digital access control company. Utilising Near Field Communication (NFC)

PassEntry passes are accessible natively within mobile wallets and managed through our cloud-based dashboard.

PassEntry Event Access

PassEntry Event Access delivers innovative digital event access solutions reducing the inefficiencies associated with the production and distribution of physical tickets in addition to labour costs.

How It Works

Ticket holders simply present their digital ticket to you as they would a normal paper ticket. For advanced verification, the NFC digital pass can be used in conjunction with a PassEntry reader - Physical passes can of course still be used.

Benefits

Eliminate ticket loss / damage

- Unlike physical tickets, digital tickets cannot be lost or damaged

Eliminate ticket fraud

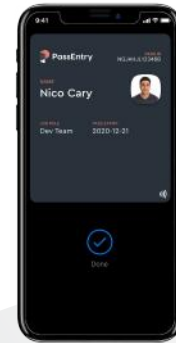

- Ability to utilise mobile phone security (Face-recognition, Pin, Fingerprint) before access to ticket

No App installation

- PassEntry tickets are accessible natively within iOS and Android devices

Cost and time effective

- Digital tickets can be issued electronically saving time and lowering costs associated with distribution of physical tickets

(powered by PassEntry)

Visual verification or verification
via PassEntry Reader

PassEntry Dashboard
(works with third party register)

Environmentally friendly

- Eliminate paper usage and wastage

Unlock new ways of engagement

- Send push notifications to your attendees

Frictionless entry

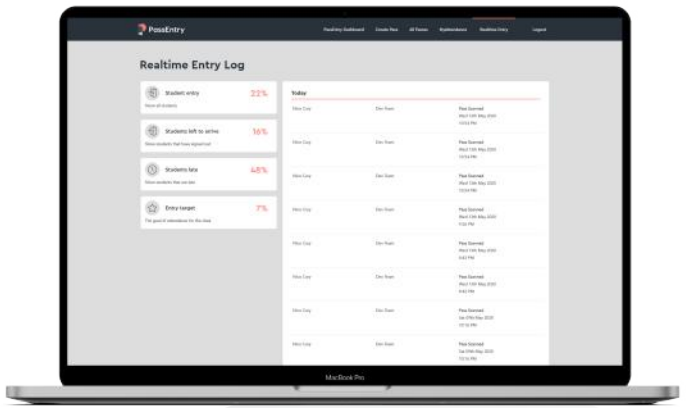

- Reduce the queue times to get into a venue

PassEntry Tickets

Event organisers can issue PassEntry tickets to attendees via PassEntry's Dashboard or pre-existing platforms.

From within the PassEntry Dashboard, event organisers can issue, edit, revoke and view event metrics in addition to sending powerful custom notifications.

The Hardware

For added security, PassEntry tickets are validated using our readers.

Our compact readers can be both mains and battery powered for increasing flexibility.

Security

PassEntry uses bank level encryption – which is more secure than HID and removes single point of failure.

Smartphones ask for authentication (Pin, Facial recognition, biometric) before allowing users to access PassEntry, adding additional level of security

PassEntry is Ideal for

Events

- Concerts
- Stadiums
- Festivals
- Pop-up events
- Nightclubs
- Galas

Hospitality

- Corporate boxes
- VIP access
- Member enclosures
