### TARIFFS GOT YOU DOWN? POWER UP WITH CHILICON POWER

As you probably know, the majority of solar products manufactured in China now have a 25% tariff applied. This'll undoubtedly have rippling effects in the US market. While other manufacturers of inverters and optimizers will be hit with this tax, one company will not. For nearly a decade now, Chilicon Power has been manufacturing a world class microinverter system- right here in the USA. While we realize a lot of folks might not care about the origins of a product, we're proud our equipment's American made. Our factory's located in Simi Valley, California, about 40 miles north of Los Angeles (or approximately three hours in traffic;). If you're ever in the area, let us know. We'd love to give you a tour.

In the meantime, why not try us out on a pilot program? We've recently unleashed our new CP-720 twin inverter- and the results have been fantastic. The CP-720 works with any module on the market and the entire system with cabling and monitoring comes in under 30 cents a watt for most installs. What's more, the CP-720 provides the most power per module of any inverter in the industry. As solar pros know, the quality's always been there with our products- now the price is, too. In fact, installers all over the country have been switching to Chilicon Power over the past few years. And with the new tariffs in effect, now just might be the perfect time for you to do the same.

**Check Out the CP-720 Data Sheet**
