### CP-720: THE MOST POWERFUL PER MODULE INVERTER IN SOLAR

Since you've last used us, we've made major strides in perfecting the quality of our equipment. This product enhancement is evident with the new CP-720. Since it's unveiling in November 2018, the CP-720 has been performing exceptionally well in the field. A twin inverter, the CP-720 pumps out an impressive 720 watts of power- 360 per module. That's 24% more output than the Enphase IQ series. What's more, the CP-720 is extremely versatile. It's compatible with any module on the market, including 96 and 128 cell. And the best part is the price: the entire microinverter system, with our modular cabling and superior monitoring, is under 30 cents a watt for most installs.

So why not try Chilicon Power again? I think you'll be extremely pleased with the results.
