## *Revolutionizing the Solar Industry*

### THE MOST POWERFUL, COST EFFECTIVE MICROINVERTER EVER MANUFACTURED

The world's most advanced solar system just got more advanced. We're proud to introduce our newest generation of inverters: the CP-720, a

powerful, practical micro designed for both residential and commercial installations. Backed by a 25-year warranty, it's compatible with virtually every module on the market, including 96 cell. Like the company's flagship CP-250E (290 W output), this revolutionary inverter contains no electrolytic components and performs extremely well in heat (tested to over 300 degrees!). The CP-720 offers unparalleled performance and reliability, providing peace of mind for both installers and homeowners.

## BEST KEPT SECRET IN SOLAR

The quality of a Chilicon system has never been in doubt, a known secret in the solar industry. The Gateway is a technologically superior monitoring system, an all-in-one smart home hub that offers total energy consumption and home security options. Equipped with a 7 inch touch screen and color graphics display (customers love it!) the Gateway is powered by a robust PLC that ensures seamless communication with the inverters. Solar professionals love it because the Gateway's smart features- such as auto discovery of the micros- save time and money on installs.

Our modular cabling solution is praised by installers for its ease and simplicity. With our 10 gauge cables, you can put 20 inverters on a string with a 30 amp breaker. Not only can you mix portrait and landscape on an array, there's no splicing or termination caps needed. Put together, the Gateway and the modular cables allow for the fastest setup and commissioning in the industry. **And here's the real exciting news: with the unveiling of the high-performance CP-720, Chilicon now beats the competition on price, too.**
