Revolutionizing the Solar Industry

Soligent

SOLIGENT PARTNERS WITH CHILICON POWER

Chilicon Power is excited to announce a partnership with Soligent, the largest distributor of solar equipment in the United States. A pioneer in the solar industry for decades, Soligent continues to drive the market forward with innovative solutions ranging from materials management to project financing. After extensive evaluation, Soligent has added Chilicon's world class microinverter system to its esteemed portfolio. This strategic alliance provides homeowners and businesses with increased access to Chilicon Power products.

BEST KEPT SECRET IN SOLAR

The quality of a Chilicon system has never been in doubt, a known secret in the solar industry. The Gateway is a technologically superior monitoring system, an all-in-one smart home hub that offers total energy consumption and home security options. Equipped with a 7 inch touch screen and color graphics display (customers love it!) the Gateway is powered by a robust PLC that ensures seamless communication with the inverters. Solar professionals love it because the Gateway's smart features- such as auto discovery of the micros- save time and money on installs.

Our modular trunk cables have been praised by installers for their ease and simplicity. The 10 gauge cables allow for 20 inverters per string with a 30 amp breaker. Not only can you mix portrait and landscape on an array, there's no splicing or termination caps needed. Then, of course, there's the inverter itself. Producing 290 watts of continuous output for 60 and 72 cell modules, the CP-250E contains no electrolytic components and performs exceptionally well in heat (tested to over 300 degrees Fahrenheit!). Backed by a 25-year warranty, the CP-250E is a reliable, efficient, and cost effective solution for both residential and commercial applications.
