

Chilicon Power

Revolutionizing the Solar Industry

The Gateway to Supreme Customer Satisfaction (and More Sales)

Solar's most technologically advanced monitoring system just got even more advanced. Chilicon Power is proud to announce a host of improvements to its industry leading CP-100 Gateway, sure to please homeowners and installers alike. The most significant upgrades include:

- * **Zero-Interference Communication Between Adjacent Solar Systems**

Whether it's side-by-side homes or large commercial arrays, the Gateway's Time Division Multiple Access (TDMA) scheduling enables interference-free communication without the need for line for line filters or isolation transformers.

- * **Battery Backup**

The Gateway now comes equipped with its own battery and will maintain its state even when the power's down.

- * **Automatic Discovery of Inverters**

The fastest setup and commissioning in solar is now even quicker. Once the installation is complete, simply plug in the Gateway and it'll do the rest, saving you time and labor.

- * **Increased Wi-Fi Security**

The all-in-one smart home hub provides support for hidden SSID.
