

Chilicon Power

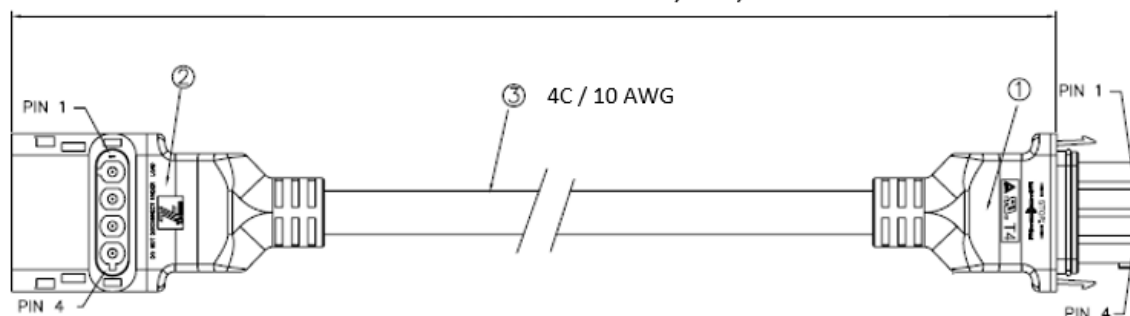

Revolutionizing The Solar Industry

NEW, HIGH CAPACITY CABLING 20 INVERTERS PER STRING

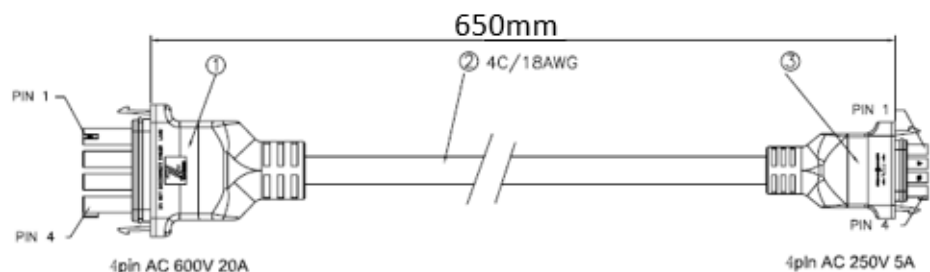

The quickest setup and commissioning in solar just got even quicker. Chilicon Power is proud to announce the latest addition to its world class product line: 10 gauge trunk cables for both portrait and landscape modes. For 240 V split phase, you can now install 20 inverters in a string on a 30 amp breaker; for 208 V three phase, it's 18 micros per string. The cables are fully modular- just plug and play, no cutting or splicing necessary- allowing you to mix portrait and landscape on the same string (1.025, 1.7, and 2.15 meters). The trunk cables are also self-terminating and come equipped with integrated grounding. All in all, a superior cabling solution, saving both time and labor. Fast and simple- that's the Chilicon way.

TRUNK CABLE SEGMENTS

AVAILABLE LENGTHS: 1.025, 1.7, 2.15m
