

Mechanical Designer

Toronto, ON

Hello and Welcome! We are one of the nation's fastest-growing companies for a reason: we deliver reliable, high-quality designs to our clients that maximize cost savings while utilizing the latest technology.

Design Works Engineering is a worldwide venture based in Canada, working from eight offices globally. Finding cost-effective solutions isn't restrained by borders, and we've discovered forward-thinking companies around the world that not only want the latest technology built into their design, they also want to work with a company that cares about their bottom line. That's part of the reason we've experienced more than 10% growth in each year of our operation.

Our offered services include Civil Engineering, Structural Engineering, Mechanical Engineering, Electrical Engineering, Energy Modeling, and Sprinkler Design. These services then lead to our projects – including Residential, Retail, Offices, Hospitality, Industrial, and Mixed-Use. We focus on maximizing quality while minimizing delays, as we recognize that administrative delays play a crucial role in projects. End-solutions are also the leading edge of our work, comprised of the industry's most updated research and best practices.

The position:

We are actively seeking a creative mechanical designer to join our growing location in Toronto, ON.

What will you be doing?

- Provide the coordination, verification and design of mechanical building systems in various sectors (multi-family residential, commercial, industrial).
- Design mechanical building systems
- Work closely with engineers to provide solutions tailored to clients' needs
- Understand and implement personal and company safety by adhering to all safety requirements.
- Assist in preparing, calculating, engineering, design of drawings and specifications
- Supervise, monitor and inspect mechanical installations and construction project

What you bring?

- A Diploma in mechanical design/technology with a minimum of 5-10 years experience
- Experience designing multi-family residential buildings
- Proficient in Microsoft Office, AutoCAD, and Revit
- Fluent in English
- Comfortable multi-tasking and prioritizing tasks without guidance
- Excellent interpersonal skills
- Being a natural self-starter with the ability to prioritize, self-schedule, meet tight deadlines, and work with colleagues from various departments, market sectors, and locations

At Design Works Engineering we are offering a career rather than a job: supporting our team members to reach their full potential is at the heart of our business for delivering superior value to our clients on each of our building projects.

The most qualified candidates will be contacted directly by Design Works Engineering for further discussion.
