

Mission: SMB Preferred Partner in the AWS MAP 2.0 Pilot Program

Mission is a preferred SMB Migration Partner and part of the AWS Migration Acceleration 2.0 Program (MAP 2.0) Pilot Program. With operational practices honed over hundreds of migrations, we guide SMBs migration through implementation with minimal interruptions and near-zero downtime, getting them to the AWS cloud quickly and efficiently.

Migrate to the Cloud

Moving to the cloud can be transformative for SMBs, but the initial preparation leading up to migration is often daunting — with so many decisions and budgetary considerations to factor, it can be easy to get overwhelmed. As part of the MAP 2.0 Program, Mission is here to help guide SMBs through the three Migration phases: Assess, Mobilize and Migrate & Modernize.

PHASE 1

Assess

Mission leads a **Migration Readiness Assessment (MRA)** that leverages AWS migration best practices and CloudChomp’s cost analytics tool to help you identify and work through any migration challenges. We will help you set up CloudChomp’s TCO analysis tool, which can gather valuable information about your data center’s infrastructure and identify ways to eliminate wasteful overprovisioning. On average, The TCO analysis tool shows customers a **41% savings** over traditional lift and shift strategies.

PHASE 2

Mobilize

Using hard data from your on-prem infrastructure, we’ll help you build a **migration plan** that aligns your business and technology objectives with AWS best practices. As part of our comprehensive consultation, we will review this data and walk through **discovery and planning**. This includes identifying potential technical blockers, any financial implications or hurdles, as well as any knowledge or skill gaps that need to be addressed to ensure your team is set up for success both before and after migration.

PHASE 3

Migrate & Modernize

During this last phase, Mission will finalize the migration methodology and begin migrating your applications, ensuring that all applications have been tested. In addition, once your applications are in the cloud, we’ll help you optimize, and modernize your AWS environment for both spend and performance.

Benefits of Migrating with Mission

Get Unstuck with a Strategic Roadmapping Plan

Build organizational consensus around the path forward by outlining your successful migration to the AWS cloud.

Align Business and Operations with Modern Technology

Deliver the promise of the cloud to your business, driving the innovation and modernization you need to stay competitive.

Accurate Forecasting for Optimal Financial Planning

With an emphasis on accurate financial forecasting, our MRA provides increased certainty, transparency, and granularity into the factors driving cost.

Save Big

With greater insight into your cost drivers and actual utilization, you'll be able to better optimize your AWS environment while you migrate, realizing substantial savings over a straight 'lift and shift' migration.

Understand Your Licensing Needs

Licensing can have a dramatic impact on costs. We will help you determine your licensing needs and costs post-migration to avoid unwelcome surprises.

Next Steps

To start planning your migration with data-driven insights and AWS best practices, contact contact Mission for a 1-hour consulting session:
