

# COVID-19 VACCINE STUDY

For adults 18 and older

COVID-19 is affecting Black/African Americans with underlying conditions (asthma, heart disease, diabetes, obesity) at higher rates.

Finding a vaccine that protects everyone in the community is a top priority.

The first step is having people be part of a study to see what works.

**The vaccine WILL NOT cause you to get COVID-19.**

## What to expect:

2 vaccines within a month

Blood collection at most visits.  
Nasal swab at some visits.

Paid up to \$725 for approx. 6-7 visits

You will come to clinic 4-5 times in the first 6 months.  
Follow up visits at 1 year and 2 years after vaccines.

Possible common reactions after each vaccine

Pain, tenderness or redness where the vaccine was given, fever, headache, feeling tired, nausea, vomiting, muscle aches or joint pain.
