

# MECHANICAL / INDUSTRIAL SERVICES > INSPECTION & TESTING

RSGx offers a range of inspection activities including remote visual inspection, hydrostatic pressure testing, N2/He leak testing, pneumatic pressure testing and condition inspection of piping and vessels.

## Visual Inspections

We offer a range of remote visual inspection equipment for either wet or dry hire.

### Drone Inspection

Through in-house and external partners we offer a range of drone inspection options for vessel and tank inspection, structural inspection, large diameter piping and solar farm inspections.

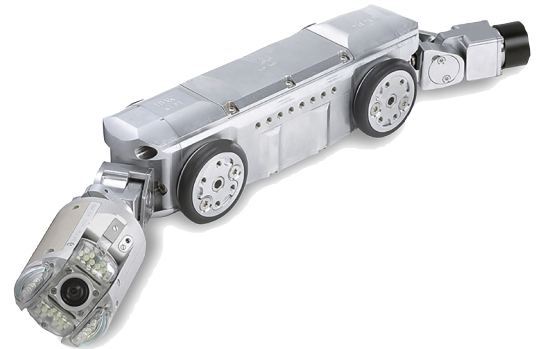

### Borescope Inspection

Borescope inspection is useful for vessels, small diameter piping, heat exchangers and rotating equipment inspection.

### Robotic Crawler / Pushrod Inspection

Primarily used for inspection of piping, pushrods generally for inspection of up to 60m of piping and robotic crawlers for inspection for 2.5km+ of piping.

## Pressure Testing

We offer both pneumatic and hydrostatic pressure testing as well as a range of leak testing and detection services.

Pressure testing can be undertaken for pipes, hoses, vessels, valves and fittings. We can test in accordance with both Australian and international standards, including but not limited to:
