

Windows Setup Guide

We recommend using one of the below applications on your Windows device:

- VLC
- ProgDVB/ProgTV
- Web Browser

VLC

1. Download the VLC media player from <https://www.videolan.org/vlc/download-windows.html>
2. Once installed, open VLC player.
3. Click on “File” in the menu in the top left corner and then select “Open network stream”.
4. Enter your m3u url and click “Open”.

ProgDVB/ProgTV

1. Download the ProgDVB app from http://www.progdvb.com/download_progdvb.html under the free of charge section. This will download and install both ProgDVB and ProgTV.
2. Open the ProgDVB program once installed, it will open straight into the setup menu. Fill in your m3u url in the first box under the “Main” tab. Change the caption from “IPTV client” to “EnterStream”.
3. Under the tab “Guide” fill in your EPG url in the first box and click “OK” at the bottom to save the setup.
4. You have now setup both the ProgDVB and ProgTV programs on your PC. We recommend taking a look through the settings and familiarising yourself with them so you can customise the app to your needs.

Web Browser

1. Please submit a ticket with the support team and they will assist with web browser viewing.
