

Mac/iOS Setup Guide

We recommend using one of the below applications on your Mac/iOS device:

- VLC
- ProgTV
- GSE
- IPTV smarters

VLC (Mac only)

1. Download the VLC media player from <https://www.videolan.org/vlc/download-windows.html>
2. Once installed, open VLC player.
3. Click on “File” in the menu in the top left corner and then select “Open network stream”.
4. Enter your m3u url and click “Open”.

ProgTV

1. Download and install the ProgTV app from the app store.
2. Open the ProgTV app and click on “IPTV client” at the top.
3. Enter your m3u url into the “Play list” box.
4. Enter your EPG url into the “Guide” box and click “OK” at the bottom.
5. Go to the main menu, select “Option” then select “Playback”. Options should be filled as below:

GSE IPTV

1. Download and install the GSE app from the app store.
2. Open the GSE app and click on the menu in the top left then select “Xtream-codes API”.
3. Click on the “+” symbol and enter in your server, username and password. Under name put “EnterStream”.
4. Check the “Auto update box” and leave it to “1 day” and then click “Add”.
5. Click on the service you just added and your channels will begin to load.

IPTV Smarters

1. Download and install the IPTV smarters from the app store.
2. Open the IPTV smarters app and provide your server, username and password.
3. Click “Save” and your channels will begin to load.
