### ANET360 is JAUPT approved

**FrancisKodak, a family-run business that is aiming to make our roads safer by improving driver training, has become the first technology platform that has been approved by JAUPT and the UK Government.**

Joint Approvals Unit for Periodic Training (JAUPT) is an organisation that monitors and approves driving training centres and platforms, making sure they meet the relevant driver training standards. Professional drivers must complete 35 hours of periodic training every five years to keep their Driver Certificate of Professional Competence (CPC). Only JAUPT-approved courses taken with approved training centres count towards periodic training.

**FrancisKodak's product, Another Set of Eyes (ANET), is an interactive platform that offers driver trainers and training providers the digital tools they need to deliver innovative and modern training.**

ANET uses a unique blend of business strategy, technology, gamification, and design-thinking to create world-class driver training experiences. With ANET, driver trainers can bring learners into lifelike, highly-engaging environments that may otherwise be too expensive, dangerous or difficult.

Francis Boroczky, director and founder of FrancisKodak Design Lab, says:

*"At FrancisKodak, we are passionate about road safety, which is why we are extremely proud to have gained JAUPT approval. We are the only software platform that has been approved by JAUPT, which underlines the potential ANET holds. We offer cutting-edge yet cost-effective technology to fleet operators and training providers and freelancers that allows them to meet compulsory driver training standards, such as JAUPT, on a limited budget."*
