

MODEL 701

Heliport Surface Floodlight with No Light in Cover

Additional part of the 700 series

The Model 701 is used as an independent floodlight

Under ICAO standards, it may be installed outside the FATO at surface level or in general it may be installed outside the safety area at a 4 foot elevation in the transition space. The wide beams are aimed to uniformly illuminate a 100° spread and reflect the surface of the landing area without glare. The overall height is only 9.5 inches
